

# MISP feeds - A simple and secure approach to generate, select and collect intelligence

Providing ready-to-use threat intelligence in MISP

*TLP:WHITE*

MISP Feeds provide a way to

- **Exchange information via any transports** (e.g. HTTP, TLS, USB keys)
- Preview events along with their attributes, objects
- Select and import events
- **Correlate attributes using caching**

MISP Feeds have the following advantages

- Feeds work without the need of MISP synchronisation (reducing attack surface and complexity to a static directory with the events)
- **Feeds can be produced without a MISP instance** (e.g. security devices, honeypot sensors)

# FEED - OVERVIEW

- By default, MISP is bundled with ~50 default feeds (MISP feeds, CSV or freetext feeds) which are not enabled by default and described in a simple JSON file<sup>1</sup>.
- The feeds include CIRCL OSINT feed but also feeds like abuse.ch, Tor exit nodes or many more<sup>2</sup>.

### Feeds

Generate feed lookup caches or fetch feed data (enabled feeds only)

Cache all feeds Cache freetext/CSV feeds Cache MISP feeds Fetch and store all feed data

Caching	Actions
Age: 12m	     

- Cache feed attributes for correlation (not imported but visible in MISP)
- Disable feed
- Explore remote events
- Fetch all events (imported in MISP as event)
- Edit the feed configuration (e.g. authentication, URL,...)
- Remove feed
- Download feed metadata (to share feed details)

feed generator fetches events (matching some filtering) from a MISP instance and construct the manifest (defined in *MISP core format*) needed to export data.

Particularly,

- Used to generate the **CIRCL OSINT feed**
- Export events as json based on tags, organisation, events, ...
- Automatically update the dumps and the metadata file
- Comparable to a lightweight **TAXII interface**

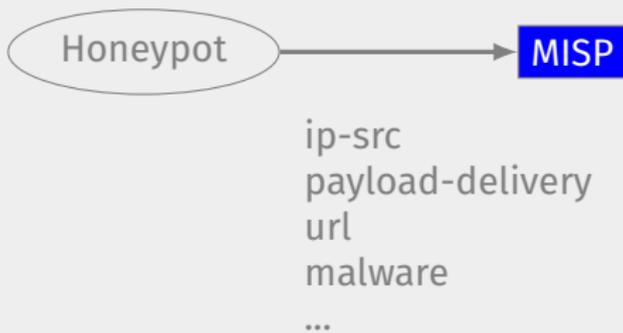

# Feed generator - CONFIGURATION FILE

```
1 url = 'your/misp/url'
2 key = 'YourAPIKey'
3 ssl = True
4 outputdir = 'output_directory'
5
6 filters = {
7     'tag': 'tlp:white|feed-export|!privint',
8     'org': 'CIRCL'
9 }
10 # the above would generate a feed for all events created by CIRCL,
    # tagged tlp:white and/or feed-export but exclude anything
    # tagged privint
11
12 valid_attribute_distribution_levels = ['0', '1', '2', '3', '4', '5',
    '']
13 # 0: Your Organisation Only
14 # 4: Sharing Group
15 # 5: Inherit Event
16
```

# Real-time FEED GENERATOR - PURPOSE

The PyMISP feed generator is great but may be inadequate or inefficient:

- Batch import of attributes/objects
- Data producer doesn't have a MISP instance at hand and only wants to **produce a directly consumable feed**:

# Real-time FEED GENERATOR - USAGE

- `generator.py` exposes a class allowing to generate a MISP feed in real-time
- Each items can be appended on daily generated events

Example:

```
1 # Init generator
2 generator = FeedGenerator()
3
4 # Adding an attribute to the daily event
5 attr_type = "ip-src"
6 attr_value = "8.8.8.8"
7 additional_data = {}
8 generator.add_attribute_to_event(attr_type,
9                                 attr_value,
10                                **additional_data)
```

## Real-time FEED GENERATOR - USAGE (2)

```
1 # Adding a MISP object (cowrie) to the daily event
2 obj_name = "cowrie"
3 obj_data = {
4     "session": "session_id",
5     "username": "admin",
6     "password": "admin",
7     "protocol": "telnet"
8 }
9 generator.add_object_to_event(obj_name, **obj_data)
```

# ADDING CUSTOM FEED TO MISP

List Feeds  
Add Feed  
Import Feeds from JSON  
Feed overlap analysis matrix  
Export Feed settings

## Add MISP Feed

Add a new MISP feed source.

Enabled
