MISP
Threat Sharing

- MISP¹ is a threat information sharing free & open source software.
- MISP has **a host of functionalities** that assist users in creating, collaborating & sharing threat information - e.g. flexible sharing groups, **automatic correlation**, free-text import helper, event distribution & proposals.
- Many export formats which support IDSes / IPses (e.g. Suricata, Bro, Snort), SIEMs (eg CEF), Host scanners (e.g. OpenIOC, STIX, CSV, yara), analysis tools (e.g. Maltego), DNS policies (e.g. RPZ).
- A rich set of MISP modules² to add expansion, import and export functionalities.

¹<https://github.com/MISP/MISP>

²<https://www.github.com/MISP/misp-modules>

- During a malware analysis workgroup in 2012, we discovered that we worked on the analysis of the same malware.
- We wanted to share information in an easy and automated way **to avoid duplication of work.**
- Christophe Vandeplass (then working at the CERT for the Belgian MoD) showed us his work on a platform that later became MISP.
- A first version of the MISP Platform was used by the MALWG and **the increasing feedback of users** helped us to build an improved platform.
- MISP is now **a community-driven development.**

The Computer Incident Response Center Luxembourg (CIRCL) is a government-driven initiative designed to provide a systematic response facility to computer security threats and incidents. CIRCL is the CERT for the private sector, communes and non-governmental entities in Luxembourg and is operated by securitymadein.lu g.i.e.

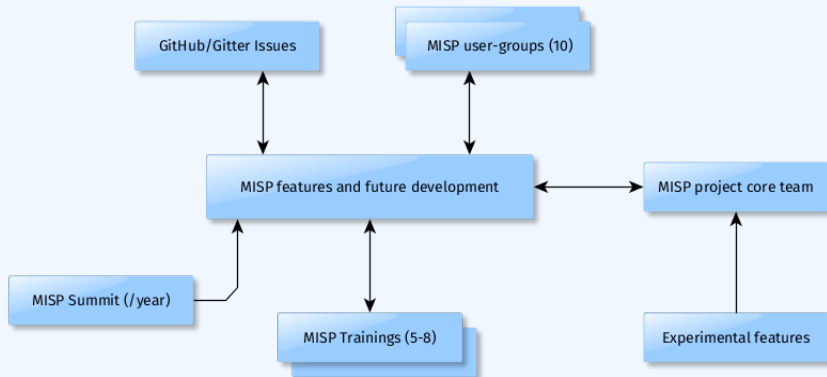

- CIRCL is mandated by the Ministry of Economy and acting as the Luxembourg National CERT for private sector.
- CIRCL leads the development of the Open Source MISP threat intelligence platform which is used by many military or intelligence communities, private companies, financial sector, National CERTs and LEAs globally.
- **CIRCL runs multiple large MISP communities performing active daily threat-intelligence sharing.**

Co-financed by the European Union

Connecting Europe Facility

MISP MODEL OF GOVERNANCE

- There are many different types of users of an information sharing platform like MISP:
 - ▶ **Malware reversers** willing to share indicators of analysis with respective colleagues.
 - ▶ **Security analysts** searching, validating and using indicators in operational security.
 - ▶ **Intelligence analysts** gathering information about specific adversary groups.
 - ▶ **Law-enforcement** relying on indicators to support or bootstrap their DFIR cases.
 - ▶ **Risk analysis teams** willing to know about the new threats, likelihood and occurrences.
 - ▶ **Fraud analysts** willing to share financial indicators to detect financial frauds.

- Communities are groups of users sharing within a set of common objectives/values.
- CIRCL operates multiple MISP instances with a significant user base (more than 950 organizations with more than 2400 users).
- **Trusted groups** running MISP communities in island mode (air gapped system) or partially connected mode.
- **Financial sector** (banks, ISACs, payment processing organizations) use MISP as a sharing mechanism.
- **Military and international organizations** (NATO, military CSIRTs, n/g CERTs,...).
- **Security vendors** running their own communities (e.g. Fidelis) or interfacing with MISP communities (e.g. OTX).

- Sharing indicators for a **detection** matter.
 - ▶ 'Do I have infected systems in my infrastructure or the ones I operate?'
- Sharing indicators to **block**.
 - ▶ 'I use these attributes to block, sinkhole or divert traffic.'
- Sharing indicators to **perform intelligence**.
 - ▶ 'Gathering information about campaigns and attacks. Are they related? Who is targeting me? Who are the adversaries?'
- → These objectives can be conflicting (e.g. False-positives have different impacts)

- Sharing difficulties are not really technical issues but often it's a matter of **social interactions** (e.g. **trust**).
- Legal restriction³
 - ▶ "Our legal framework doesn't allow us to share information."
 - ▶ "Risk of information-leak is too high and it's too risky for our organization or partners."
- Practical restriction
 - ▶ "We don't have information to share."
 - ▶ "We don't have time to process or contribute indicators."
 - ▶ "Our model of classification doesn't fit your model."
 - ▶ "Tools for sharing information are tied to a specific format, we use a different one."

MISP PROJECT OVERVIEW

- Contributors can use the UI, API or using the freetext import to add events and attributes.
 - ▶ Modules existing in Viper (a binary framework for malware reverser) to populate and use MISP from the vty or via your IDA.
- Contribution can be direct by creating an event but **users can propose attributes updates** to the event owner.
- **Users should not be forced to use a single interface to contribute.**

GETTING SOME NAMING CONVENTIONS OUT OF THE WAY...

■ Data layer

- ▶ **Events** are encapsulations for contextually linked information
- ▶ **Attributes** are individual data points, which can be indicators or supporting data.
- ▶ **Objects** are custom templated Attribute compositions
- ▶ **Object references** are the relationships between other building blocks

■ Context layer

- ▶ **Tags** are labels attached to events/attributes and can come from **Taxonomies**
- ▶ **Galaxy-clusters** are knowledge base items used to label events/attributes and come from **Galaxies**.

A RICH DATA-MODEL: TELLING STORIES VIA RELATIONSHIPS

Date	Org	Category	Type	Value	Tags	Galaxies	Comment	Correlate	Related Events
2018-09-28		Other	status-code:	A - Active		Add		<input type="checkbox"/>	
2018-09-28		Other	report-code:	STR Suspicious Transaction Report		Add		<input type="checkbox"/>	
2018-09-28		Other	personal-account-type:	A - Business		Add		<input type="checkbox"/>	
2018-09-28		Financial fraud	swift:	HASEH09H		Add		<input checked="" type="checkbox"/>	3849 11320 11584
2018-09-28		Financial fraud	account:	788796894883		Add		<input checked="" type="checkbox"/>	
2018-09-28		Other	account-name:	FANY SILU CO. LIMITED		Add		<input checked="" type="checkbox"/>	
2018-09-28		Other	currency-code:	USD		Add		<input type="checkbox"/>	

CONTEXTUALISATION AND AGGREGATION

- MISP integrates at the event and the attribute levels MITRE's Adversarial Tactics, Techniques, and Common Knowledge (ATT&CK).

Initial access	Execution	Persistence	Privilege escalation	Defense evasion	Credential access	Discovery	Lateral movement	Collection	Exfiltration	Command and control
Spearphishing Attachment	Scripting	Screensaver	File System Permissions Weakness	Process Hollowing	Secured Memory	Password Policy Discovery	AppleScript	Data from Information Repositories	Exfiltration Over Alternative Protocol	Standard Application Layer Protocol
Spearphishing via Service	Command-Line Interface	Login item	AppCert DLLs	Code Signing	Input Capture	System Network Configuration Discovery	Distributed Component Object Model	Data from Removable Media	Exfiltration Over Command and Control Channel	Communication Through Removable Media
Trusted Relationship	User Execution	Trap	Application Shimring	Rookit	Bash History	Process Discovery	Pass the Hash	Man in the Browser	Data Compressed	Custom Command and Control Protocol
Replication Through Removable Media	Regsvcs/Regasm	System Firmware	Scheduled Task	NTFS File Attributes	Exploitation for Credential Access	Network Share Discovery	Exploitation of Remote Services	Data Staged	Automated Exfiltration	Multi-Stage Channels
Exploit Public Facing Application	Trusted Developer Utilities	Registry Run Keys / Start Folder	Startup Items	Exploitation for Defense Evasion	Private Keys	Peripheral Device Discovery	Remote Desktop Protocol	Screen Capture	Scheduled Transfer	Remote Access Tools
Spearphishing Link	Windows Management Instrumentation	LC_LOAD_DYLIB Addition	New Service	Network Share Connection Removal	Brute Force	Account Discovery	Pass the Ticket	Email Collection	Data Encrypted	Uncommonly Used Port
Valid Accounts	Service Execution	LSASS Driver	Sudo Caching	Process Doppelgänger	Password Filter DLL	System Information Discovery	Windows Remote Management	Clipboard Data	Exfiltration Over Other Network Medium	Multilayer Encryption
Supply Chain Compromise	CMSTP	Rc common	Process Injection	Disabling Security Tools	Two-Factor Authentication Interception	System Network Connections Discovery	Windows Admin Shares	Video Capture	Exfiltration Over Physical Medium	Domain Fronting
Drive-by Compromise	Control Panel Items	Authentication Package	Bypass User Account Control	Timestamp	LLMNR/NBT-NS Poisoning	Network Service Scanning	Remote Services	Audio Capture	Data Transfer Size Limits	Data Obfuscation
Hardware Additions	Dynamic Data Exchange	Component Firmware	Extra Window Memory Injection	Modify Registry	Credentials in Files	File and Directory Discovery	Taint Shared Content	Data from Network Shared Drive		Connection Proxy
	Source	Windows Management Instrumentation Event Subscription	Setuid and Setgid	Indicator Removal from Tools	Forced Authentication	Security Software Discovery	Application Deployment Software	Data from Local System		Commonly Used Port
	Space after Filename	Change Default File	Launch Daemon	Hidden Window	Keychain	System Service Discovery	Third-party Software	Automated Collection		Data Encoding

- Sharing via distribution lists - **Sharing groups**
- **Delegation** for pseudo-anonymised information sharing
- **Proposals** and **Extended events** for collaborated information sharing
- Synchronisation, Feed system, air-gapped sharing
- User defined **filtered sharing** for all the above mentioned methods
- Cross-instance information **caching** for quick lookups of large data-sets
- Support for multi-MISP internal enclaves

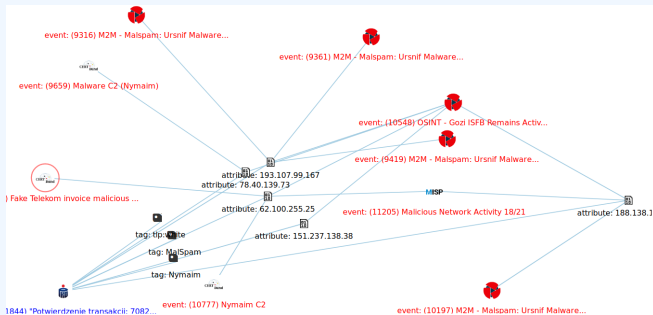

MISP CORE DISTRIBUTED SHARING FUNCTIONALITY

- MISPs' core functionality is sharing where everyone can be a consumer and/or a contributor/producer."
- Quick benefit without the obligation to contribute.
- Low barrier access to get acquainted to the system.

- Correlating data
- Feedback loop from detections via **Sightings**
- **False positive management** via the warninglist system
- **Enrichment system** via MISP-modules
- **Integrations** with a plethora of tools and formats
- Flexible **API** and support **libraries** such as PyMISP to ease integration
- **Timelines** and giving information a temporal context
- Full chain for **indicator life-cycle management**

CORRELATION FEATURES: A TOOL FOR ANALYSTS

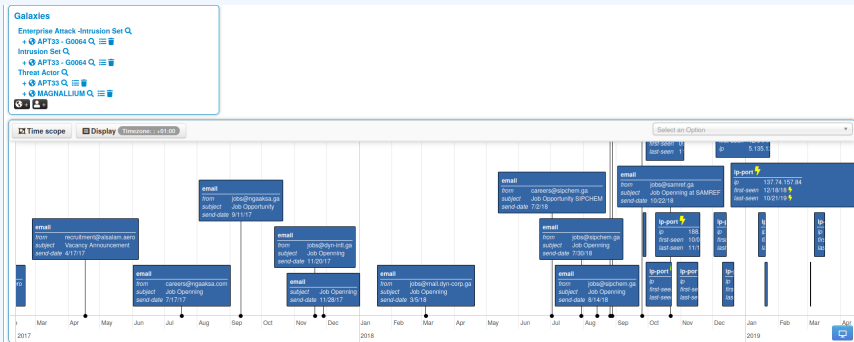

- To **corroborate a finding** (e.g. is this the same campaign?), **reinforce an analysis** (e.g. do other analysts have the same hypothesis?), **confirm a specific aspect** (e.g. are the sinkhole IP addresses used for one campaign?) or just find if this **threat is new or unknown in your community**.

The screenshot displays a user interface for managing sightings. At the top, there is a table with the following columns: 'Events', 'No', and 'Inherit'. The table contains three rows, each with a checkmark in the 'Events' column and a 'No' in the 'No' column. A tooltip titled 'Sightings' is overlaid on the first row, showing 'CIRCL: 2 (2017-03-19 16:17:59)'. Below the table, there is a 'Tags' section with a plus sign, a 'Date' field with the value '2016-02-24', a 'Threat Level' field with the value 'High', an 'Analysis' field with the value 'Initial', and a 'Distribution' field with the value 'Connected communities'. A 'Sighting Details' section is also visible, showing 'freeltext test' and a 'No' status. Below this, there is a 'MISP: 2' and 'CIRCL: 2' section, and a 'Discussion' button.

- Has a data-point been **sighted** by me or the community before?
- Additionally, the sighting system supports negative sightings (FP) and expiration sightings.
- Sightings can be performed via the API or the UI.
- Many use-cases for **scoring indicators** based on users sighting.
- For large quantities of data, **SightingDB** by Devo

TIMELINES AND GIVING INFORMATION A TEMPORAL CONTEXT

- Recently introduced **first_seen** and **last_seen** data points
- All data-points can be placed in time
- Enables the **visualisation** and **adjustment** of indicators timeframes

LIFE-CYCLE MANAGEMENT VIA DECAYING OF INDICATORS

The screenshot shows a web interface for managing indicators. At the top, there are navigation tabs: "Photos", "Galaxy", "Event graph", "Correlation graph", "ATTACK matrix", "Attributes", and "Discussion". Below these is a search bar containing "45: Decay...". A "Galaxies" section is visible with a search icon and a plus sign. Below that are navigation buttons: "previous", "next >", and "view all".

The main content is a table with the following columns: "Date", "Org", "Category", "Type", "Value", "Tags", "Galaxies", "Comment", "Correlate", "Related Events", "Feed hits", "IDS", "Distribution", "Sightings", "Activity", "Score", and "Actions". The table contains five rows of data, each representing an indicator. The "Score" column shows values like 65.26, 79.88, 54.6, 37.43, and 23.31. A blue "Decay score" toggle button is visible in the top right of the table area.

Date	Org	Category	Type	Value	Tags	Galaxies	Comment	Correlate	Related Events	Feed hits	IDS	Distribution	Sightings	Activity	Score	Actions
2019-09-12		Network activity	ip-src	5.5.5.5								Inherit	(0/0)		65.26	
2019-08-13		Network activity	ip-src	8.8.8.8	adm_rality_scale:source-reliability="A" x retention:expired x				1 2 2 2 Show S1.1 S1.2 11 more...			Inherit	(5/0)	54.6		
2019-08-13		Network activity	ip-src	9.9.9.9	adm_rality_scale:source-reliability="C" x misp:confidence-level="completely-confident" x Ipnumber				1 3 1 9 Show S1.1 28 more...			Inherit	(4/1)	37.43		
2019-08-13		Network activity	ip-src	7.7.7.7	adm_rality_scale:information-credibility="4" x retention:20 x				41			Inherit	(3/0)	37.41		
2019-07-18		Network activity	ip-src	6.6.6.6					41			Inherit	(0/0)	23.31

DECAYING OF INDICATORS: SIMULATION TOOL

Simulate *Attributes* with different *Models*

- **Information sharing practices come from usage** and by example (e.g. learning by imitation from the shared information).
- MISIP is just a tool. What matters is your sharing practices. The tool should be as transparent as possible to support you.
- Enable users to customize MISIP to meet their community's use-cases.
- MISIP project combines open source software, open standards, best practices and communities to make information sharing a reality.
