CSIRTS NETWORK, NOTIFICATION AND SHARING SCENARIOS

E.104

CIRCL COMPUTER INCIDENT RESPONSE CENTER LUXEMBOURG

MISP PROJECT https://www.misp-project.org/

OCTOBER 27, 2022 - VO.7

CSIRT NETWORK INFORMATION EXCHANGE

- Well established methodologies and rule-sets
- Reliance on a common understanding of information releasability
- Network wide exchange tooling and practices

MAIN OBJECTIVES OF INFORMATION SHARING FROM A CSIRT PERSPECTIVE

- **■** Incident response
- **Proactive information sharing** for detection and prevention
- **■** Takedown notifications

THE INCIDENT RESPONSE USE-CASES

- Collaboration during incident repsonse
 - ► Multiple CSIRTs involved in the IR of a single victim
 - Ongoing campaigns against multiple victims in different constituencies
- Building baseline rulesets for hunting / IR

PROACTIVE INFORMATION SHARING

- One of the objectives of CSIRTs is often informing and preparing their constituencies against ongoing campaigns
 - ► Sharing of indicators and TTPs
 - Categorising and publishing metrics on the ongoing threat actor activities
 - Sharing of preventative measures, remediation playbooks and supporting tools
- These can be used for:
 - Building protective measures (IDS, firewall, SIEM, EDR rules, etc)
 - ► Gap analysis for the deployed counter-measures' relevance
 - Decisions on staff recruitment and trainings based on the required expertise

4 | 1

TAKEDOWN NOTIFICATIONS

- Abuse handling often delegated to the CSIRTs who
 - ► The contact providers to issue takedown requests
 - Potentially liaise with law enforcement on more drastic measures
- Takedown requests can be difficult due attacks originating in another country
- A working relationship with operators and hosting providers can speed up the process
- **Contacts to local law enforcement** also help
- Involving the responsible CSIRT therefore is customary

SHARING IN PRACTICE

- The actual sharing happens over different layers (from most to least stricly formalised)
 - Automated information sharing for structured intelligence (via for example MISP)
 - Recurring report on trends based on surveys conducted in the network (for example ENISA Cyber Weather)
 - ► **Takedown notifications** assistance requests to the responsible CSIRTs
 - Conference calls for certain high priority campaigns (via for example BBB, Jitsi, webex, etc)
 - ► Ad-hoc discussions and information requests (via mailing lists, chat applications such as mattermost)

ADHERING TO RELEASABILITY

- Simple to understand sharing models
 - ► TLP is understood to be authoritative in the network
 - ► PAP used less frequently, it is an additional way to mark the accepted actions to be carried out on the information
- Besides data, meetings and individual discussion channels all can have an indicated baseline TLP level
- Networks such as this are built on trust that needs to be fostered

AUTOMATED INFORMATION SHARING

- **■** Indicators, context, enrichments, sightings
- The objectives of the data are **automation** as well as building **knowledge-bases** for future use
- Strong validation and contextualisation is crucial
- Parts of the data will end up in the proactive sharing with the constituency
- Information about the Victim is excluded
- Information about the attacker beyond the attacker modus operandi are also excluded
- The objective is protection / remediation rather than dealing with the attacker

TAKEDOWN REQUESTS

- Malicious infrastructure IPs, IP ranges, domains
- Timeline of the malicious activities
- Network logs for verification and evidence towards the provider

AD-HOC COMMUNICATIONS

- E-mails, chats, video conferences
- Network wide vs ad-hoc exchanges
- Inter-personal trust relationships go a long way
- Request for information (has anyone else also seen...?)
- Updates on conclusions drawn during incidents (we are seeing a rise in a specific type of attacks abusing a given vulnerability)

CSIRT exchanges with law enforcement

- Sharing information during the rendering of assistance to law enforcement during an ongoing forensics case
- Creating data-sets to bootstrap the forensics investigations of law enforcement
- Attacker trends being shared both ways
- Assistance in the takedown process
