MISP TRAINING: MISP DEPLOYMENT AND INTEGRATION

A COMMON INTEGRATION

MISP Training: MISP Deployment and Integration

MSP Deployment and Integration

Common Integration

RECOMMENDED MISP SETUP

- Provisioning your MISP infrastructure depends heavily on the **number of attributes/events** (whether your dataset is below or above 50 million attributes).
- Number of MISP instances and the overall design depends on the following factors:
 - ► Is your community private? Are you gathering MISP events from other communities? Are you **publishing events to external** (trusted/untrusted) communities.
 - ► Do you plan to have **automatic tools** (e.g. sandbox analysis or low-value information needing correlation or an analyst workbench) feeding MISP?

OMMENDED MISP SETUP

 Provisioning your MISP infrastructure depends heavily o the number of attributes/events (whether your dataset below or above 50 million attributes).

Number of MISP instances and the overall design deper on the following factors:

 Is your community private? Are you gathering MISP ever from other communities? Are you publishing events to

external (trusted/untrusted) communities.

Do you plan to have automatic tools (e.g. sandbox analysis low-value information needing correlation or an analyst

ch) feeding MISP?

VENDORS AND FORMATS

- There is a jungle of formats with some vendors having little to no interest in keeping their users autonomous.
- Attacks and threats require a dynamic format to be efficiently shared (e.g. from financial indicators to personal information).
- Review your current list of formats/vendors to ensure a limited loss of information, especially when exporting from MISP to other formats (e.g. STIX not supporting financial indicators or taxonomies/galaxies).

> view your current list of formats/vendors to ensure a nited loss of information, especially when exporting fron SP to other formats (e.g. STDX not supporting financial dicators or taxonomies/galaxies).

USE CASE: NORMALIZING OSINT AND PRIVATE FEEDS

- Normalizing external input and feed into MISP (e.g. feed importer).
- Comparing feeds before import (how many similarities? false-positives?).
- Evaluating quality of information before import (warning-list lookup at feed evaluation).

MISP Training: MISP Deployment and Integration

–Use case: Normalizing OSINT and Private Feeds Normalizing external input and feed into MISP (e.g. feed

aluating quality of information before import (warning-list okup at feed evaluation).

importer).

false-positives?).

Praluating quality of information before import (warning-li

CONNECTING DEVICES AND TOOLS TO MISP

- One of the main goals of MISP is to feed protective or detection tools with data
 - ► IDSes / IPSes (e.g. Suricata, Bro, Snort format as included in Cisco products)
 - ► SIEMs (e.g. CEF, CSV or real-time ZMQ pub-sub or Sigma)
 - ► Host scanners (e.g. OpenIOC, STIX, yara rule-set, CSV)
 - ► Various analysis tools (e.g. Maltego)
 - ► DNS policies (e.g. RPZ)
- Various ways of exporting this data (downloads of the selected data, full exports, APIs)
- The idea was to leave the selection process of the subset of data to be pushed to these up to the user using APIs.

- FIDSes / IPSes (e.g. Suricata, Bro, Short format as include Cisco products)

 SIEMs (e.g. CEF, CSV or real-time ZMQ pub-sub or Sigma)

 Most recovery (e.g. OpenIOC, STIX years relevant CSV)
- Host scanners (e.g. OpenIOC, STIX, yara rule-set, CSV
 Various analysis tools (e.g. Maltego)
 DNS policies (e.g. RPZ)
- selected data, full exports, APIs)
- The idea was to leave the selection process of the subset of data to be pushed to these up to the user using APIs.

SIEM AND MISP INTEGRATION

- SIEMs and MISP can be integrated with different techniques depending on the processes at your SOC or IR:
 - ► Pulling events (via the API) or indicator lists at **regular intervals** in a given time frame to perform lookups.
 - ► Subscribing to the MISP ZMQ **pub-sub channel** to directly get the published events and use these in a lookup process.
 - ► **Lookup expansion module** in MISP towards the SIEM to have a direct view of the attributes matched against the SIEM.
- The above options can be combined, depending on your organisation or requirements to increase coverage and detection.

-SIEM and MISP Integration

AND MISP INTEGRATION

SIEMs and MISP can be integrated with different technique depending on the processes at your SOC or IR:

Pulling events (via the API) or indicator lists at regular intervals in a given time frame to perform lookups.

Subscribing to the MISP ZMO pub-sub channel to directly.

the published events and use these in a lookup proces

Lookup expansion module in MISP towards the SIEM to

The above options can be combined, depending on your organisation or requirements to increase coverage and detection.

ZMQ INTEGRATION: MISP-DASHBOARD

- A dashboard showing live data and statistics from the ZMQ pub-sub of one or more MISP instances.
- Building low-latency software by consuming pub-sub channel provides significant advantages over standard API use.
- Process information in **real-time** when it's updated, created, published or gathered in MISP.
- Demo!

MISP Training: MISP Deployment and Integration

-ZMQ integration: misp-dashboard

A datableard showing live data and statistics from the ZMQ pub-sub of one or more MEP instances.
 Building low-latency software by consuming pub-sub-channel provides subjective and swarps over standard API

Process information in real-time when it's updated, created

NEW INTEGRATIONS: IR AND THREAT HUNTING USING MISP

- Close co-operation with **the Hive project** for IR
 - ► Interact with MISP directly from the Hive
 - ► Use both the MISP modules and the **Cortex** analysers in MISP or the Hive directly
- Using MISP to support your threat hunting via **McAfee**OpenDXL
- (https://securingtomorrow.mcafee.com/business/ optimize-operations/ expanding-automated-threat-hunting-response-open-

THE HIVE INTEGRATION

11

MISP Training: MISP Deployment and Integration

☐ The Hive integration

- **Sightings** allow users to notify a MISP instance about the activities related to an indicator.
- Activities can be from a SIEM (e.g. Splunk lookup validation or **false-positive feedback**), a NIDS or honeypot devices¹.
- Sighting can affect the API to limit the NIDS exports and improve the NIDS rule-set directly.

MISP Training: MISP Deployment and Integration

Reporting Back from your Devices, Tools or Processes

ING BACK FROM YOUR DEVICES, TOOLS OR SES

s Sightings can be positive, negative or even based on

- iration, different use cases are possible:
- Signtings allow users to notify a MISP instance about the activities related to an indicator.
- Activities can be from a SIEM (e.g. Splunk lookup va
- Sighting can affect the API to limit the NIDS exports and improve the NIDS rule-set directly.
