DASHBOARD IN MISP

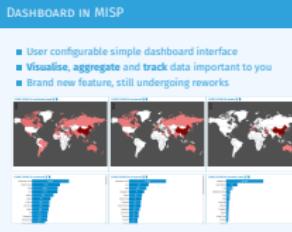

- User configurable simple dashboard interface
- Visualise, aggregate and track data important to you
- Brand new feature, still undergoing reworks

Visualise all the things

2022-08-05

└ Dashboard in MISP

- Backend for the widget, full access to all MISP internals
- Load, convert, format to be represented via view widgets
- Widget metadata - size, name, description, behaviours
- Only main function required to be implemented: **handler()**
- Optional: **checkPermissions()** for ACL
- Accepts user configuration for which a template can be provided
- Located in /var/www/MISP/app/Lib/Dashboard/
- Custom widgets can be placed in /var/www/MISP/app/Lib/Dashboard/Custom/

The internals of awidget

- Backend for the widget, full access to all MISP internals
- Load, convert, format to be represented via view widgets
- Widget metadata - size, name, description, behaviours
- Only main function required to be implemented: **handler()**
- Optional: **checkPermissions()** for ACL
- Accepts user configuration for which a template can be provided
- Located in /var/www/MISP/app/Lib/Dashboard/
- Custom widgets can be placed in /var/www/MISP/app/Lib/Dashboard/Custom/

THE VIEW LAYER OF A WIDGET

- View files are included by default and reusable
- Currently we have a small but growing list of views
 - ▶ BarChart
 - ▶ SimpleList
 - ▶ WorldMap
- Converts the data passed by the Widget logic to HTML
- Located in
</var/www/MISP/view/Elements/dashboard/Widgets/>

 - ▶ WorldMap
- Converts the data passed by the Widget logic to HTML
- Located in
</var/www/MISP/view/Elements/dashboard/Widgets/>

- Widgets can additionally be tied to certain **behaviours**:
 - ▶ Caching
 - Executions of the widget logic are cached
 - **Separate caches for each organisation in addition to site admins**
 - Cache duration is controlled by the widget logic
 - ▶ Refresh
 - Widgets can be set to refresh after x seconds
 - ▶ Both of these should be used with special care in regards to the use of **system resources**

Widget behaviours

- Widgets can additionally be tied to certain **behaviours**:
 - ▶ Caching
 - Executions of the widget logic are cached
 - Separate caches for each organisation in addition to site admins
 - Cache duration is controlled by the widget logic
 - ▶ Refresh
 - Widgets can be set to refresh after x seconds
 - ▶ Both of these should be used with special care in regards to the use of **system resources**

- Let's start with a skeleton
- Create /var/www/MISP/app/Lib/Dashboard/Cus-
tom/WhoamiWidget.php
- MISP will parse anything ending with Widget.php in this
directory

2022-08-05

└ Exercise module: simple Whoami

- Let's start with a skeleton
- Create /var/www/MISP/app/Lib/Dashboard/Cus-
tom/WhoamiWidget.php
- MISP will parse anything ending with Widget.php in this
directory

```
1 <?php
2 class MispWhoamiWidget
3 {
4     public $title = 'Whoami';
5     public $render = 'SimpleList';
6     public $width = 2;
7     public $height = 2;
8     public $params = array();
9     public $description = 'Shows information about the
10        currently logged in user.';
11     public $cacheLifetime = false;
12     public $autoRefreshDelay = 3;
13
14     public function handler($user, $options = array())
15     {
16         $data = array();
17         return $data;
18     }
}
```

└ Exercise module: simple Whoami

```
1 /**
2  * @file
3  * Class MispWhoamiWidget
4  */
5 class MispWhoamiWidget
6 {
7     public $title = 'Whoami';
8     public $render = 'SimpleList';
9     public $width = 2;
10    public $height = 2;
11    public $params = array();
12    public $description = "Shows information about the
13        currently logged in user.";
14    public $cacheLifetime = false;
15    public $autoRefreshDelay = 3;
16
17    public function handler($user, $options = array())
18    {
19        $data = array();
20        return $data;
21    }
}
```

META INFORMATION

- **\$title:** The name of the widget
- **\$description:** A description of the widget
- **\$render:** The view element to use in rendering the widget
- **\$width & \$height:** Default relative dimensions
- **\$params:** Configuration array with explanations for each key
- **\$cacheLifetime:** The lifetime of the caches in seconds (false disables it)
- **\$autoRefreshDelay:** The time in seconds between each refresh (false disables it)
