Content of the presentation

Content of the presentation

1. Automation in MISP
2. MISP API / PyMISP
3. PubSub channels (ZeroMQ)
4. MISP Workflows
   - Fundamentals
   - Demo with examples
   - Using the system
   - How it can be extended

Automation in MISP: What already exists?

MISP API / PyMISP

- Needs CRON Jobs in place
- Potentially heavy for the server
- Not realtime

PubSub channels

- After the actions happen: No feedback to MISP
- Tougher to put in place & to share
- Full integration amounts to develop a new tool

Automation in MISP: What already exists?

MISP API / PyMISP
- Needs CRON Jobs in place
- Potentially heavy for the server
- Not realtime

PubSub channels
- After the actions happen: No feedback to MISP
- Tougher to put in place & to share
- Full integration amounts to develop a new tool

MISP API / PyMISP - Fundamentals

Objective: Get to know how to use the MISP API PyMISP

MISP API / PyMISP -

MISP API / PyMISP - Fundamentals

Objective: Get to know how to use the MISP API PyMISP

MISP API / PyMISP - Demo

- Generate an API key
- RestClient overview
- MISP API Overview notebook[1]
- PyMISP Overview notebook[2]

PubSub channels (ZeroMQ) - Fundamentals

Objective: Learn how to setup realtime automation using the ZeroMQ channel

PubSub channels (ZeroMQ)

PubSub channels (ZeroMQ) - Fundamentals

Objective: Learn how to setup realtime automation using the ZeroMQ channel

ZeroMQ channel - Demo

- What is ZeroMQ?
  - *N-to-N Asynchronous message-processing tasks*
  - *Publisher (MISP) and consumer (scripts)*
- Configuring ZeroMQ in MISP
- Integrating with the ZeroMQ of MISP

ZeroMQ channel - Demo
- What is ZeroMQ?
  - N-to-N Asynchronous message-processing tasks
  - Publisher (MISP) and consumer (scripts)
- Configuring ZeroMQ in MISP
- Integrating with the ZeroMQ of MISP

MISP Workflows - Fundamentals

Objective: Learn how to use the MISP Worklfow feature

MISP Workflows - Fundamentals

MISP Workflows - Fundamentals

Objective: Learn how to use the MISP Worklfow feature

Automation in MISP: What already exists?

MISP API / PyMISP

- Needs CRON Jobs in place
- Potentially heavy for the server
- Not realtime

PubSub channels

- After the actions happen: No feedback to MISP
- Tougher to put in place & to share
- Full integration amounts to develop a new tool

→ No way to **prevent** behavior
→ Difficult to setup **hooks** to execute callbacks

Automation in MISP: What already exists?
MISP API / PyMISP
Needs CRON Jobs in place
Potentially heavy for the server
Not realtime
PubSub channels
After the actions happen: No feedback to MISP
Tougher to put in place & to share
Full integration amounts to develop a new tool
→ No way to prevent behavior
→ Difficult to setup hooks to execute callbacks

What type of use-cases are we trying to support?

- **Prevent** default MISP behaviors to happen
  - Prevent **publication of events** not passing sanity checks
  - Prevent **querying** thrid-party **services** with sensitive information
  - …
- **Hook** specific actions to run callbacks
  - **Automatically run** enrichment services
  - Modify data on-the-fly: False positives, enable CTI-Pipeline
  - Send notifications in a chat rooms
  - …

What type of use-cases are we trying to support?
GEEKWEEK
Prevent default MISP behaviors to happen
Prevent publication of events not passing sanity checks
Prevent querying thrid-party services with sensitive information
…
Hook specific actions to run callbacks
Automatically run enrichment services
Modify data on-the-fly: False positives, enable CTI-Pipeline
Send notifications in a chat rooms
…

Simple automation in MISP made easy

- Why?
  - Everyone loves **simple automation**
  - **Visual** dataflow programming
  - Users want **more control**
- How?
  - **Drag & Drop** editor
  - Prevent actions **before they happen**
  - Flexible **Plug & Play** system
  - **Share** workflows, **debug** and **replay**

Example of use-cases

- **Notification** on specifc actions
  - New events matching criteria
  - New users
  - Automated alerts for high-priority IOCs
- **Extend** existing MISP behavior
  - Push data to another system
  - Automatic enrichment
  - Sanity check to block publishing / sharing
- **Hook** capabilities
  - Assign tasks and notify incident response team members
  - Run curation pipeline
- ...

Example of use-cases
- Notification on specifc actions
  - New events matching criteria
  - New users
  - Automated alerts for high-priority IOCs
- Extend existing MISP behavior
  - Push data to another system
  - Automatic enrichment
  - Sanity check to block publishing / sharing
- Hook capabilities
  - Assign tasks and notify incident response team members
  - Run curation pipeline
- ...

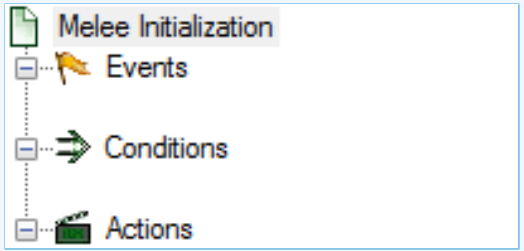
Workflow - Fundamentals

Objective: Start with the foundation to understand the basics

Workflow - Fundamentals

Objective: Start with the foundation to understand the basics

How does it work



1. An **event** happens in MISP
2. Check if all **conditions** are satisfied
3. Execute all **actions**
   - May prevent MISP to complete its original event

How does it work
Melee Initialization
Events
Conditions
Actions
1. An event happens in MISP
2. Check if all conditions are satisfied
3. Execute all actions
   - May prevent MISP to complete its original event

What kind of events?

Events

- New MISP Event
- Attribute has been saved
- New discussion post
- New user created
- Query against third-party services
- ...

Supported events in MISP are called **Triggers**

A **Trigger** is associated with **1-and-only-1 Workflow**

What kind of events?
Events
New MISP Event
Attribute has been saved
New discussion post
New user created
Query against third-party services
...
Supported events in MISP are called Triggers
A Trigger is associated with 1-and-only-1 Workflow

Triggers currently available

Currently 10 triggers can be hooked. 3 being **Blocking**.

Triggers

List the available triggers that can be listened to by workflows.
Missing a trigger? Feel free to open a Github issue!
Documentation and concepts

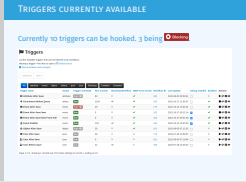
Page 1 of 1, showing 1 records out of 10 total, starting on record 1, ending on 10

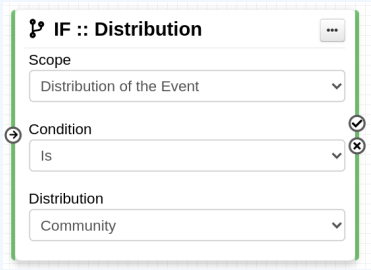


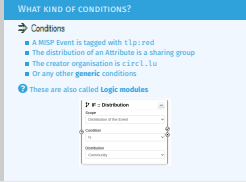
What kind of conditions?

Conditions

- A MISP Event is tagged with `tlp:red`
- The distribution of an Attribute is a sharing group
- The creator organisation is `circl.lu`
- Or any other **generic** conditions

These are also called **Logic modules**





Workflow - Logic modules

- **logic** modules: Allow to redirect the execution flow.
  - IF conditions
  - Delay execution

All | Action | Logic | misp-module | Custom | Blocking | Enabled | Disabled | Enter value to search | Filter

Module name	Type	Blocking	MISP Core format	misp-module	Custom	Enabled	Actions
Blueprint logic module	logic	✗	✗	✗	✓	✗	▶ 👁
Concurrent Task	logic	✗	✗	✗	✗	✓	■ 👁
IF :: Distribution	logic	✗	✓	✗	✗	✓	■ 👁
Filter :: Generic	logic	✗	✗	✗	✗	✗	▶ 👁
Filter :: Remove filter	logic	✗	✗	✗	✗	✗	▶ 👁
IF :: Generic	logic	✗	✗	✗	✗	✓	■ 👁

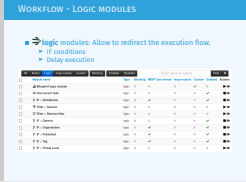
IF :: Published	logic	✗	✓	✗	✗	✓	■ 👁
IF :: Tag	logic	✗	✓	✗	✗	✓	■ 👁
IF :: Threat Level	logic	✗	✗	✗	✗	✗	▶ 👁

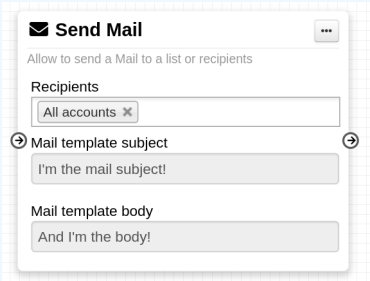


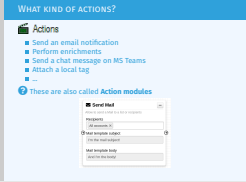
What kind of actions?

Actions

- Send an email notification
- Perform enrichments
- Send a chat message on MS Teams
- Attach a local tag
- ...

These are also called **Action modules**





Workflow - Action modules

- **action** modules: Allow to executes operations
  - Tag operations
  - Send notifications
  - Webhooks & Custom scripts

All | Action | Logic | misp-module | Custom | Blocking | Enabled | Disabled | Enter value to search | Filter

Module name	Type	Blocking	MISP Core format	misp-module	Custom	Enabled	Actions
Attach enrichment	action	✗	✓	✗	✗	✓

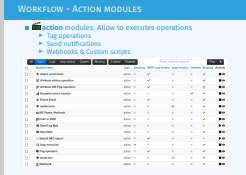
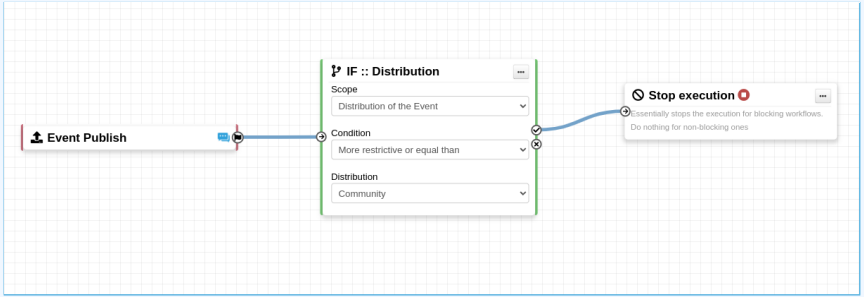
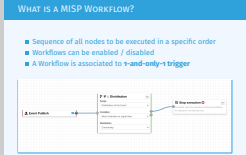
Push to ZMQ	action	✗	✗	✗	✗	✓	
Send Log Mail	action	✗	✗	✗	✗	✗	
Send Mail	action	✗	✗	✗	✗	✓	
Splunk HEC export	action	✗	✓	✗	✗	✗	
Stop execution	action	✓	✗	✗	✗	✓	
Tag operation	action	✗	✓	✗	✗	✓	
testaction	action	✗	✗	✓	✗	✓	
Webhook	action	✗	✗	✗	✗	✓	



What is a MISP Workflow?

- Sequence of all nodes to be executed in a specific order
- Workflows can be enabled / disabled
- A Workflow is associated to **1-and-only-1 trigger**





Workflow execution for Event publish

An Event is about to be published

- The workflow for the `event-publish` trigger starts

Conditions are evaluated

- They might change the path taken during the execution

Actions are executed

- **success**: Continue the publishing action

execute_workflow	Finished executing workflow for trigger `event-publish` (180). Outcome: success

- **failure** | `blocked`: Stop publishing and log the reason

execute_workflow	Execution stopped. Node `stop-execution` (8) from Workflow `Workflow for trigger event-publish` (180) returned the following error: Execution stopped

Blocking and non-blocking

Two types of workflows:

Blocking Workflows

- Can prevent / block the original event to happen
- If a **blocking module** blocks the action

Non blocking Workflows execution outcome has no impact

- No way to prevent something that happened in the past

Sources of Workflow modules (0)

Currently 36 built-in modules.

- **Trigger** module (11): built-in **only**
  - Get in touch if you want more
- **Logic** module (10): built-in & **custom**
- **Action** module (15): built-in & **custom**

Sources of Workflow modules (0)
Currently 36 built-in modules.
Trigger module (11): built-in only
Get in touch if you want more
Logic module (10): built-in & custom
Action module (15): built-in & custom

Sources of Workflow modules (1)

- Built-in **default** modules
  - Part of the MISP codebase
  - Get in touch if you want us to increase the selection (or merge PR!)

Sources of Workflow modules (1)
Built-in default modules
Part of the MISP codebase
Get in touch if you want us to increase the selection (or merge PR!)

Sources of Workflow modules (2)

User-defined **custom** modules

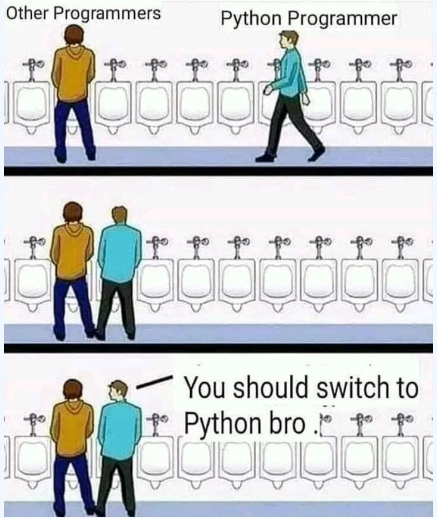
- Written in PHP
- Extend existing modules
- MISP code reuse

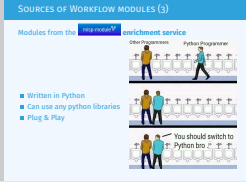
Sources of Workflow modules (2)
User-defined custom modules
Written in PHP
Extend existing modules
MISP code reuse

Sources of Workflow modules (3)

Modules from the misp-module **enrichment service**

- Written in Python
- Can use any python libraries
- Plug & Play





Demo by examples

WF-1. Send an email to **all** when a new event has been pulled

WF-2. Block queries on 3rd party services when **tlp:red** or **PAP:red**
- **tlp:red**: For the eyes and ears of individual recipients only
- **PAP:RED**: Only passive actions that are not detectable from the outside

Demo by examples
WF-1. Send an email to **all** when a new event has been pulled
WF-2. Block queries on 3rd party services when **tlp:red** or **PAP:red**
- **tlp:red**: For the eyes and ears of individual recipients only
- **PAP:RED**: Only passive actions that are not detectable from the outside

Workflow - Getting started

Objective: How to install & configure workflows

Workflow - Getting started

Objective: How to install & configure workflows

Getting started with workflows (1)

2.4.160 Epic summer release

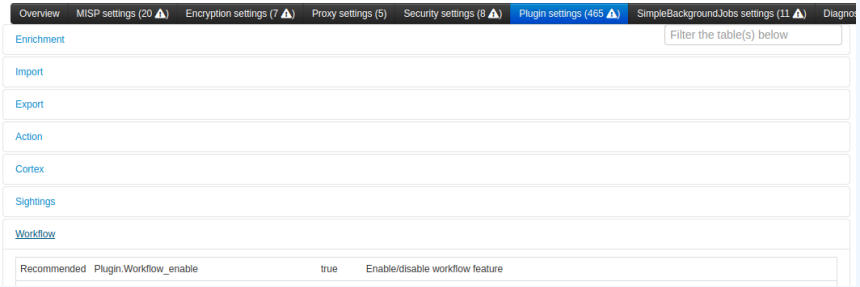
iglocska released this 08 Aug 2022 v2.4.160 71d4e2c

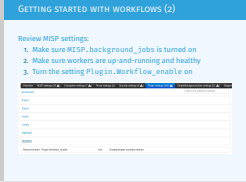
1. Update your MISP server
2. Update all your sub-modules

Getting started with workflows (2)

Review MISP settings:

1. Make sure `MISP.background_jobs` is turned on
2. Make sure workers are up-and-running and healthy
3. Turn the setting `Plugin.Workflow_enable` on

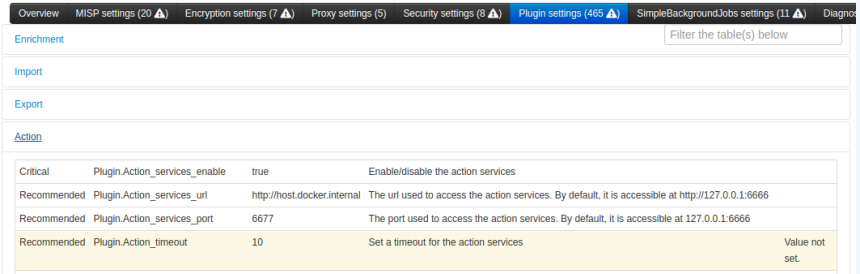


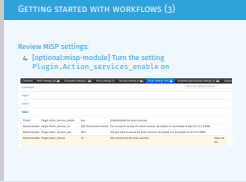


Getting started with workflows (3)

Review MISP settings:

4. [optional:misp-module] Turn the setting `Plugin.Action_services_enable` on



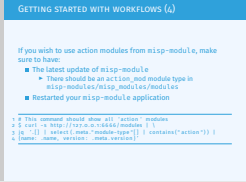


Getting started with workflows (4)

If you wish to use action modules from `misp-module`, make sure to have:

- The latest update of `misp-module`
  - There should be an `action_mod` module type in `misp-modules/misp_modules/modules`
- Restarted your `misp-module` application

```
1 # This command should show all ‘action‘ modules
2 $ curl -s http://127.0.0.1:6666/modules | \
3 jq '.[] | select(.meta."module-type"[] | contains("action")) |
4 {name: .name, version: .meta.version}'
```



Getting started with workflows (5)

Everything is ready?

Let’s see how to build a workflow!

Getting started with workflows (5)
Everything is ready?
Let’s see how to build a workflow!

Creating a workflow with the editor

1. Prevent event publication if **tlp:red** tag
2. Send a mail to `admin@admin.test` about potential data leak
3. Otherwise, send a notification on **Mattermost**, **MS Teams**, **Telegram**, ...

Creating a workflow with the editor
1. Prevent event publication if tlp:red tag
2. Send a mail to admin@admin.test about potential data leak
3. Otherwise, send a notification on Mattermost, MS Teams, Telegram, ...

Considerations when working with workflows

Objective: Overview of some common pitfalls

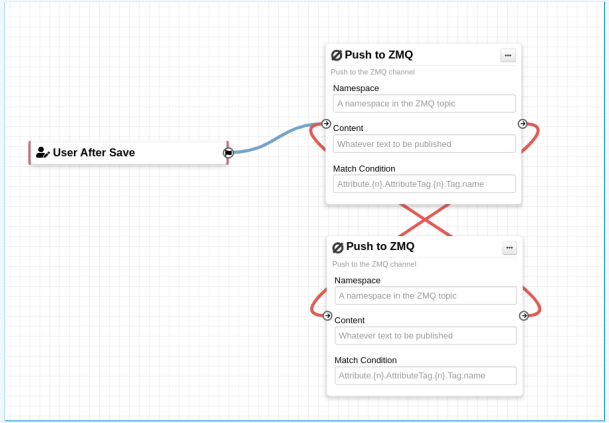
Considerations when

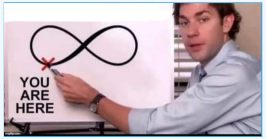
Considerations when working with workflows

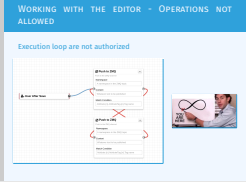
Objective: Overview of some common pitfalls

Working with the editor - Operations not allowed

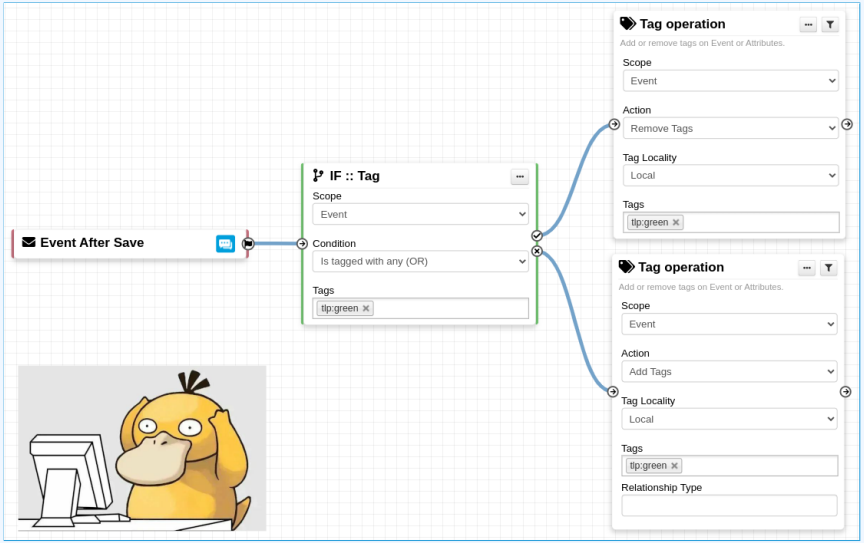
Execution loop are not authorized



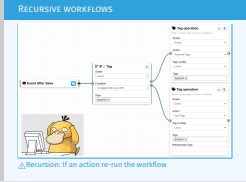




Recursive workflows

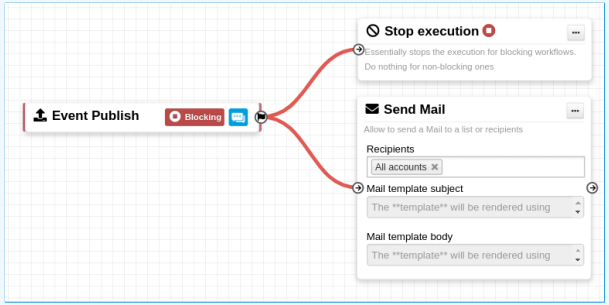


⚠Recursion: If an action re-run the workflow



Working with the editor - Operations not allowed

Multiple connections from the same output

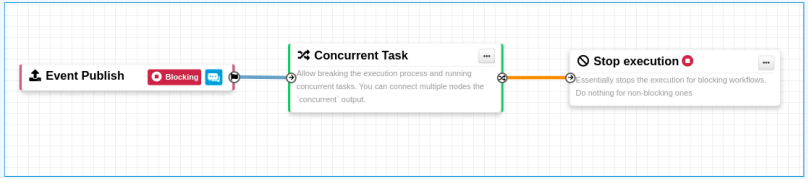


- Execution order not guaranted
- Confusing for users

Working with the editor

Cases showing a warning:

- **Blocking** modules in a Non blocking workflow 
- **Blocking** modules after a **concurrent tasks** module



Working with the editor
Cases showing a warning:
Blocking modules in a Non blocking workflow
Blocking modules after a concurrent tasks module

Advanced usage

Objective: Overview of Blueprints, Data format and Filtering

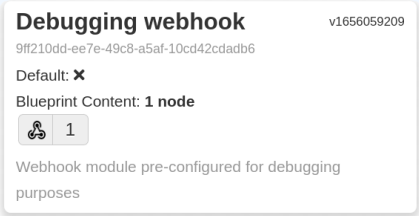
Advanced usage

Advanced usage

Objective: Overview of Blueprints, Data format and Filtering

Workflow blueprints

1. Blueprints allow to **re-use parts** of a workflow in another one
2. Blueprints can be saved, exported and **shared**



Blueprints sources:

1. Created or imported by users
2. From the `MISP/misp-workflow-blueprints` repository[3]

[3] https://github.com/MISP/misp-workflow-blueprints

Workflow blueprints

Currently, 4 blueprints available:

- Attach the `tlp:clear` tag on elements having the `tlp:white` tag
- Block actions if any attributes have the `PAP:RED` or `tlp:red` tag
- Disable `to_ids` flag for existing hash in *hashlookup*
- Set tag based on *BGP Ranking* maliciousness level

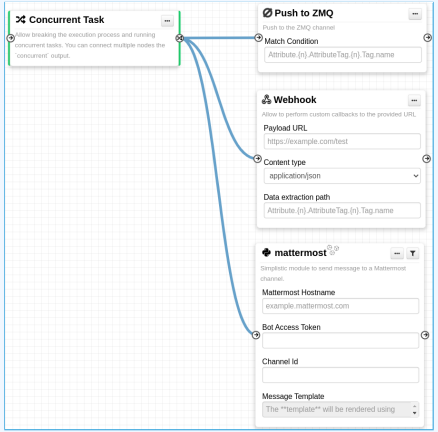
Workflow blueprints

Currently, 4 blueprints available:

- Attach the tlp:clear tag on elements having the tlp:white tag
- Block actions if any attributes have the PAP:RED or tlp:red tag
- Disable to_ids flag for existing hash in hashlookup
- Set tag based on BGP Ranking maliciousness level

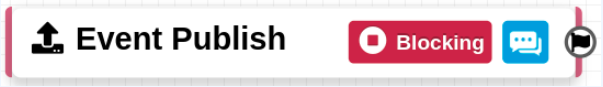
Logic module: Concurrent Task

- Logic module allowing **multiple output** connections
- **Postpone the execution** for remaining modules
- Convert Blocking → Non blocking



Logic module: Concurrent Task
Logic module allowing multiple output connections
Postpone the execution for remaining modules
Convert Blocking → Non blocking

Data format in Workflows



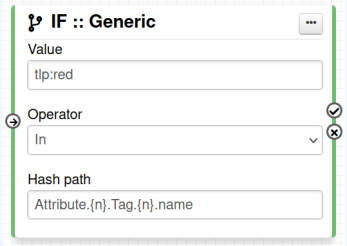
- In most cases, the format is the **MISP Core format**
  - Attributes are **always encapsulated** in the Event or Object
- But has **additional properties**
  - Additional key **`_AttributeFlattened`**
  - Additional key **`_allTags`**
  - Additional key **`inherited`** for Tags

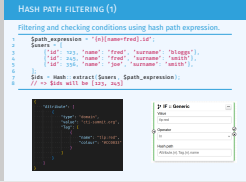
Data format in Workflows

Hash path filtering (1)

Filtering and checking conditions using hash path expression.

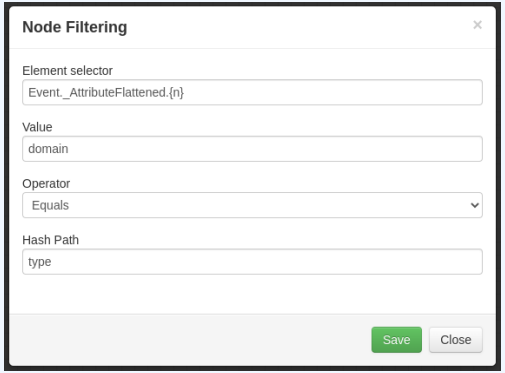
```php
$path_expression = '{n}[name=fred].id';
$users = [
    {'id': 123, 'name': 'fred', 'surname': 'bloggs'},
    {'id': 245, 'name': 'fred', 'surname': 'smith'},
    {'id': 356, 'name': 'joe', 'surname': 'smith'},
];
$ids = Hash::extract($users, $path_expression);
// => $ids will be [123, 245]
```

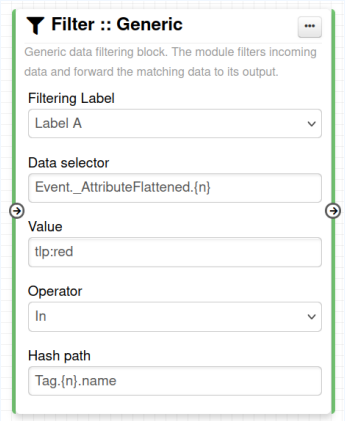


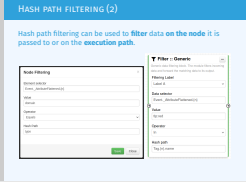


Hash path filtering (2)

Hash path filtering can be used to **filter** data **on the node** it is passed to or on the **execution path**.



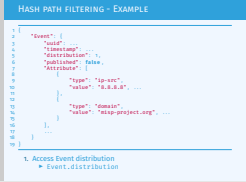




Hash path filtering - Example

```
{
    "Event": {
        "uuid": ...
        "timestamp": ...
        "distribution": 1,
        "published": false,
        "Attribute": [
            {
                "type": "ip-src",
                "value": "8.8.8.8", ...
            },
            {
                "type": "domain",
                "value": "misp-project.org", ...
            }
        ],
        ...
    }
}
```

1. Access Event distribution
   - `Event.distribution`



Hash path filtering - Exercise (1)

```
{
    "Event": {
        "uuid": ...
        "distribution": 1,
        "published": false,
        "Attribute": [
            {
                "type": "ip-src",
                "value": "8.8.8.8", ...
            },
            {
                "type": "domain",
                "value": "misp-project.org", ...
            }
        ],
        ...
    }
}
```

2. Access Event published state

Hash path filtering - Exercise (1)

```
{
    "Event": {
        "uuid": ...
        "distribution": 1,
        "published": false,
        "Attribute": [
            {
                "type": "ip-src",
                "value": "8.8.8.8", ...
            },
            {
                "type": "domain",
                "value": "misp-project.org", ...
            }
        ],
        ...
    }
}
```

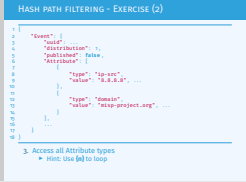
2. Access Event published state
   - `Event.published`

Hash path filtering - Exercise (1)

Hash path filtering - Exercise (2)

```
{
    "Event": {
        "uuid": ...
        "distribution": 1,
        "published": false,
        "Attribute": [
            {
                "type": "ip-src",
                "value": "8.8.8.8", ...
            },
            {
                "type": "domain",
                "value": "misp-project.org", ...
            }
        ],
        ...
    }
}
```

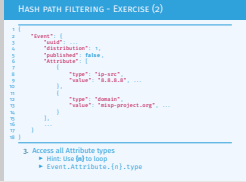
3. Access all Attribute types
   - Hint: Use **{n}** to loop



Hash path filtering - Exercise (2)

```
{
    "Event": {
        "uuid": ...
        "distribution": 1,
        "published": false,
        "Attribute": [
            {
                "type": "ip-src",
                "value": "8.8.8.8", ...
            },
            {
                "type": "domain",
                "value": "misp-project.org", ...
            }
        ],
        ...
    }
}
```

3. Access all Attribute types
   - Hint: Use **{n}** to loop
   - `Event.Attribute.{n}.type`



Hash path filtering - Exercise (3)

```
{
    "Event": {
        "Attribute": [
            {
                "type": "ip-src",
                "value": "8.8.8.8",
                "Tag": [
                    {
                        "name": "PAP:AMBER", ...
                    }
                ], ...
            }
        ],
        ...
    }
}
```

3. Access all Tags attached to Attributes

Hash path filtering - Exercise (3)
3. Access all Tags attached to Attributes

Hash path filtering - Exercise (3)

```
{
    "Event": {
        "Attribute": [
            {
                "type": "ip-src",
                "value": "8.8.8.8",
                "Tag": [
                    {
                        "name": "PAP:AMBER", ...
                    }
                ], ...
            }
        ],
        ...
    }
}
```

3. Access all Tags attached to Attributes
   - `Event.Attribute.{n}.Tag.{n}.name`

Hash path filtering - Exercise (3)
3. Access all Tags attached to Attributes
   - Event.Attribute.{n}.Tag.{n}.name

Hash path filtering - Exercise (4)

```
{
    "Event": {
        "Tag": [
            {
                "name": "tlp:green", ...
            }
        ], ...
        "Attribute": [
            {
                "value": "8.8.8.8",
                "Tag": [
                    {
                        "name": "PAP:AMBER", ...
                    }
                ], ...
            }
        ],
    }
}
```

4. Access all Tags attached to Attributes and from the Event
   - Hint: Use **_allTags** to access **all** tags

Hash path filtering - Exercise (4)

```
{
    "Event": {
        "Tag": [
            {
                "name": "tlp:green", ...
            }
        ], ...
        "Attribute": [
            {
                "value": "8.8.8.8",
                "Tag": [
                    {
                        "name": "PAP:AMBER", ...
                    }
                ], ...
            }
        ],
    }
}
```

4. Access all Tags attached to Attributes and from the Event
   - `Event.Attribute.{n}._allTags.{n}.name`

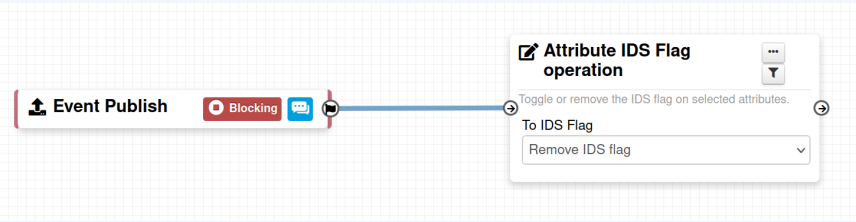
Hash path filtering - Exercise (4)

```
{
    "Event": {
        "Tag": [...],
        "Attribute": [
            {
                "value": "8.8.8.8",
                "_allTags": [
                    {
                        "name": "tlp:green",
                        "inherited": true, ...
                    },
                    {
                        "name": "PAP:AMBER",
                        "inherited": false, ...
                    }
                ],
            }
        ...
}
```

4. Access all Tags attached to Attributes and from the Event
   - `Event.Attribute.{n}._allTags.{n}.name`

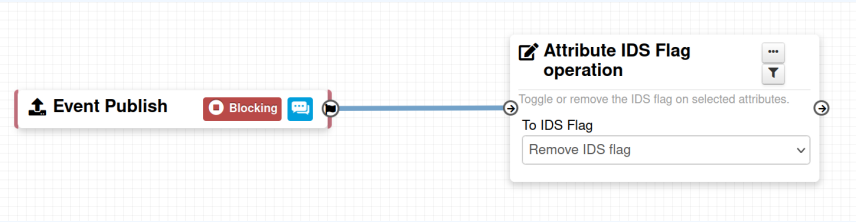
Fitlering data on which to apply a module

What happens when an Event is about to be published?



Fitlering data on which to apply a module

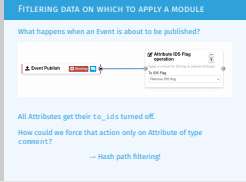
What happens when an Event is about to be published?



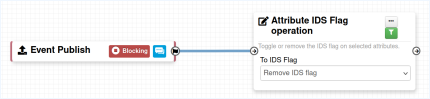
All Attributes get their `to_ids` turned off.

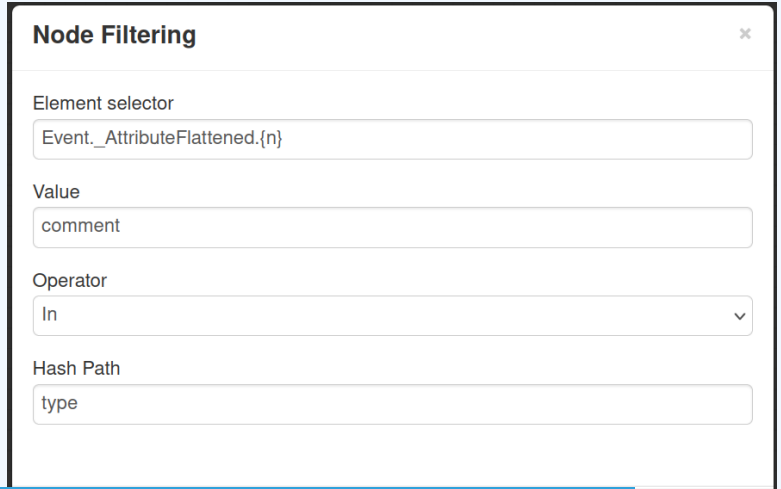
How could we force that action only on Attribute of type `comment`?

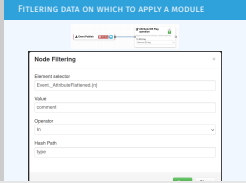
→ Hash path filtering!



Fitlering data on which to apply a module

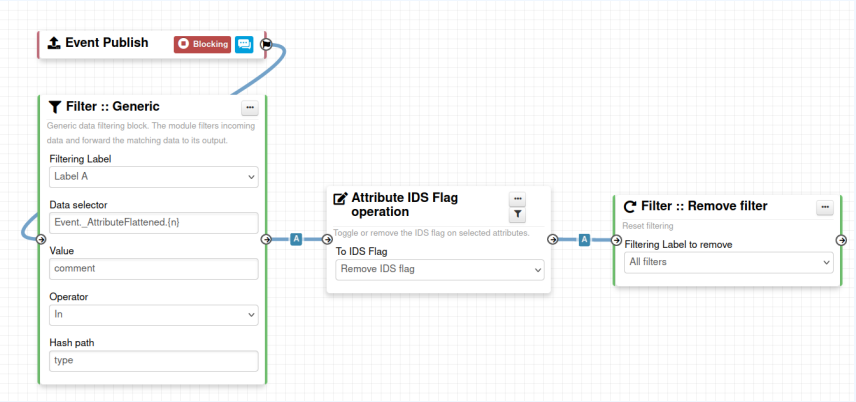






Fitlering data on which to apply on multiple modules

New feature as of **v2.4.171** allows setting filters on a path.



Fitlering data on which to apply on multiple modules
New feature as of v2.4.171 allows setting filters on a path.

Exercices

Exercises

Try to build it in the training instance. **Do not save it!**.

1. PAP:RED and tlp:red blocking
2. Replace tlp:white by tlp:clear
3. Attach tag on attribute having a low value (<50) in bgp ranking
4. Remove to_ids flag for attribute having a match in hashlookup

Exercises

Try to build it in the training instance. **Do not save it!**.

1. PAP:RED and tlp:red blocking
2. Replace tlp:white by tlp:clear
3. Attach tag on attribute having a low value (<50) in bgp ranking
4. Remove to_ids flag for attribute having a match in hashlookup

Debugging

Debugging Workflows: Log Entries

- Workflow execution is logged in the application logs:
  - `/admin/logs/index`
  - Note: Might be phased out as its too verbose
- Or stored on disk in the following file:
  - `/app/tmp/logs/workflow-execution.log`

Logs

« previous | next »

Emails | Authentication issues | MISP Update results | Setting changes | Warnings and errors

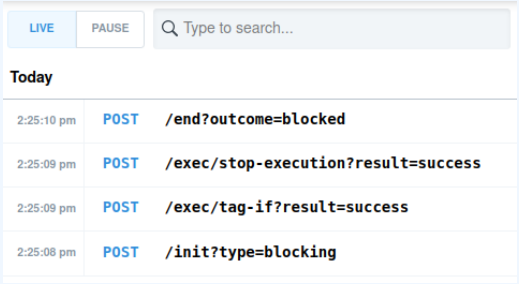
Id ↑	Email	Org	Created	Model	Model ID	Action	Title
49146	SYSTEM	SYSTEM	2022-08-01 07:34:40	Workflow	162	execute_workflow	Finished executing workflow for trigger `enrichment-before-query` (162). Outcome: success
49144	SYSTEM	SYSTEM	2022-08-01 07:34:39	Workflow	162	execute_workflow	Started executing workflow for trigger `enrichment-before-query` (162)

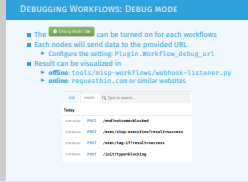
Debugging Workflows: Log Entries
Workflow execution is logged in the application logs:
/admin/logs/index
Note: Might be phased out as its too verbose
Or stored on disk in the following file:
/app/tmp/logs/workflow-execution.log
Logs

Debugging Workflows: Debug mode

- The 

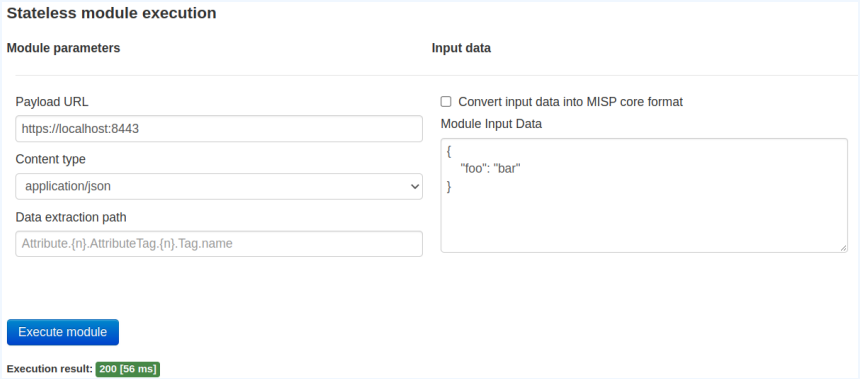
can be turned on for each workflows
- Each nodes will send data to the provided URL
  - Configure the setting: `Plugin.Workflow_debug_url`
- Result can be visualized in
  - **offline**: `tools/misp-workflows/webhook-listener.py`
  - **online**: `requestbin.com` or similar websites

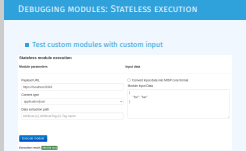




Debugging modules: Stateless execution

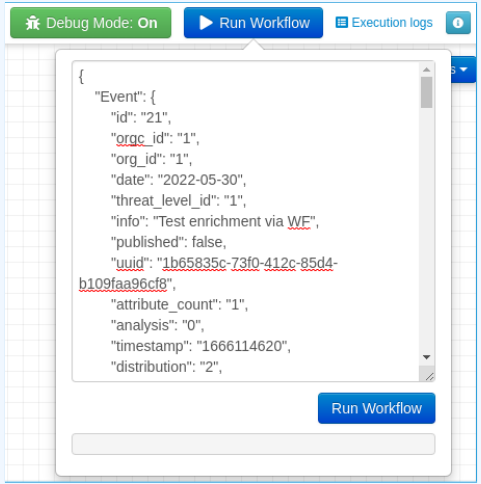
- Test custom modules with custom input

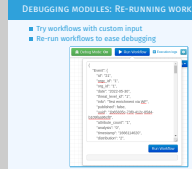




Debugging modules: Re-running workflows

- Try workflows with custom input
- Re-run workflows to ease debugging





Debugging options

- Workflow **execution and outcome**
- Module **execution and outcome**
- **Live** workflow debugging with module inspection
- **Re-running/testing** workflows with custom data
- **Stateless** module execution

Re-use existing functionalities
No need for misp-modules

Creating a new module in PHP

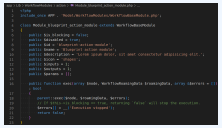
app > Lib > WorkflowModules > action > Module_blueprint_action_module.php > ...

```php
<?php
include_once APP . 'Model/WorkflowModules/WorkflowBaseModule.php';

class Module_blueprint_action_module extends WorkflowBaseModule
{
    public $is_blocking = false;
    public $disabled = true;
    public $id = 'blueprint-action-module';
    public $name = 'Blueprint action module';
    public $description = 'Lorem ipsum dolor, sit amet consectetur adipisicing elit.';
    public $icon = 'shapes';
    public $inputs = 1;
    public $outputs = 1;
    public $params = [];

    public function exec(array $node, WorkflowRoamingData $roamingData, array &$errors = [])
    : bool
    {
        parent::exec($node, $roamingData, $errors);
        // If $this->is_blocking == true, returning `false` will stop the execution.
        $errors[] = __('Execution stopped');
        return false;
    }
}
```

Creating a new module in PHP



Creating a new module in Python

- Similar to how other `misp-modules` are implemented
  - Helper functions
  - Module configuration as variables
  - Implement runtime logic
- Main benefits
  - Easier than PHP
  - Lots of libraries for integration

Creating a new module in Python

home > sami > git > misp-modules > misp_modules > modules > action_mod > testaction.py > ...

```python
import json

misperrors = {'error': 'Error'}

# config fields that your code expects from the site admin
moduleconfig = {
    'foo': {
        'type': 'string',
        'description': 'blablabla',
        'value': 'xyz'
    },
    'bar': {
        'type': 'string',
        'value': 'meh'
    }
};

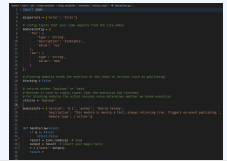
# blocking modules break the exection of the chain of actions (such as publishing)
blocking = False

# returns either "boolean" or "data"
# Boolean is used to simply signal that the execution has finished.
# For blocking modules the actual boolean value determines whether we break execution
returns = 'boolean'

moduleinfo = {'version': '0.1', 'author': 'Andras Iklody',
              'description': 'This module is merely a test, always returning true. Triggers on event publishing.',
              'module-type': ['action']}

def handler(q=False):
    if q is False:
        return False
    result = json.loads(q)  # noqa
    output = result  # Insert your magic here!
    r = {"data": output}
    return r
```

Creating a new module in Python



Should I migrate to MISP Workflows

I have automation in place using the API / ZMQ. Should I move to Workflows?

- I (have/am planning to create) a curation pipeline using the API, should I port them to workflows?
  - **No** in general, but WF can be used to start the curation process
- What if I want to **block** some actions
  - Put the blocking logic in the WF, the remaining outside
- Currently, workflows with **lots of node are not encouraged**
- Bottom line is **Keep it simple**

Should I migrate to MISP Workflows
I have automation in place using the API / ZMQ. Should I move to Workflows?
I (have/am planning to create) a curation pipeline using the API, should I port them to workflows?
No in general, but WF can be used to start the curation process
What if I want to block some actions
Put the blocking logic in the WF, the remaining outside
Currently, workflows with lots of node are not encouraged
Bottom line is Keep it simple

Future works

- More modules
- More modules
- More triggers
- More documentation
- Recursion prevention system
- On-the-fly data override?
