GOLD SOUTHFIELD - G0115

[GOLD SOUTHFIELD](<https://attack.mitre.org/groups/G0115>) is a financially motivated threat group active since at least 2019 that operates the [REvil](<https://attack.mitre.org/software/S0496>) Ransomware-as-a Service (RaaS). [GOLD SOUTHFIELD](<https://attack.mitre.org/groups/G0115>) provides backend infrastructure for affiliates recruited on underground forums to perpetrate high value deployments.(Citation: Secureworks REvil September 2019)(Citation: Secureworks GandCrab and REvil September 2019)(Citation: Secureworks GOLD SOUTHFIELD)

Operation Wocao - G0116

[Operation Wocao](<https://attack.mitre.org/groups/G0116>) described activities carried out by a China-based cyber espionage adversary. [Operation Wocao](<https://attack.mitre.org/groups/G0116>) targeted entities within the government, managed service providers, energy, health care, and technology sectors across several countries, including China, France, Germany, the United Kingdom, and the United States. [Operation Wocao](<https://attack.mitre.org/groups/G0116>) used similar TTPs and tools to APT20, suggesting a possible overlap.(Citation: FoxIT Wocao December 2019)

Axiom - G0001

[Axiom](<https://attack.mitre.org/groups/G0001>) is a cyber espionage group suspected to be associated with the Chinese government. It is responsible for the Operation SMN campaign. (Citation: Novetta-Axiom) Though both this group and [Winnti Group](<https://attack.mitre.org/groups/G0044>) use the malware [Winnti for Windows](<https://attack.mitre.org/software/S0141>), the two groups appear to be distinct based on differences in reporting on the groups' TTPs and targeting. (Citation: Kaspersky Winnti April 2013) (Citation: Kaspersky Winnti June 2015) (Citation: Novetta Winnti April 2015)

Turla - G0010

[Turla](<https://attack.mitre.org/groups/G0010>) is a Russian-based threat group that has infected victims in over 45 countries, spanning a range of industries including government, embassies, military, education, research and pharmaceutical companies since 2004. Heightened activity was seen in mid-2015. [Turla](<https://attack.mitre.org/groups/G0010>) is known for conducting watering hole and spearphishing campaigns and leveraging in-house tools and malware. [Turla](<https://attack.mitre.org/groups/G0010>)'s espionage platform is mainly used against Windows machines, but has also been seen used against macOS and Linux machines.(Citation: Kaspersky Turla)(Citation: ESET Gazer Aug 2017)(Citation: CrowdStrike VENOMOUS BEAR)(Citation: ESET Turla Mosquito Jan 2018)

APT32 - G0050

[APT32](<https://attack.mitre.org/groups/G0050>) is a threat group that has been active since at least 2014. The group has targeted multiple private sector industries as well as with foreign governments, dissidents, and journalists with a strong focus on Southeast Asian countries like Vietnam, the Philippines, Laos, and Cambodia. They have extensively used strategic web compromises to compromise victims. The group is believed to be Vietnam-based.(Citation: FireEye APT32 May 2017)(Citation: Volexity OceanLotus Nov 2017)(Citation: ESET OceanLotus)

TA505 - G0092

[TA505](<https://attack.mitre.org/groups/G0092>) is a financially motivated threat group that has been active since at least 2014. The group is known for frequently changing malware and driving global trends in criminal malware distribution.(Citation: Proofpoint TA505 Sep 2017)(Citation: Proofpoint TA505 June 2018)(Citation: Proofpoint TA505 Jan 2019)

APT28 - G0007

[APT28](<https://attack.mitre.org/groups/G0007>) is a threat group that has been attributed to Russia's General Staff Main Intelligence Directorate (GRU) 85th Main Special Service Center (GTsSS) military unit 26165.(Citation: NSA/FBI Drovorub August 2020) This group has been active since at least 2004.(Citation: DOJ GRU Indictment Jul 2018) (Citation: Ars Technica GRU indictment Jul 2018) (Citation: CrowdStrike DNC June 2016) (Citation: FireEye APT28) (Citation: SecureWorks TG-4127) (Citation: FireEye APT28 January 2017) (Citation: GRIZZLY STEPPE JAR) (Citation: Sofacy DealersChoice) (Citation: Palo Alto Sofacy 06-2018) (Citation: Symantec APT28 Oct 2018) (Citation: ESET Zebrocy May 2019)

[APT28](<https://attack.mitre.org/groups/G0007>) reportedly compromised the Hillary Clinton campaign, the Democratic National Committee, and the Democratic Congressional Campaign Committee in 2016 in an attempt to interfere with the U.S. presidential election. (Citation: CrowdStrike DNC June 2016) In 2018, the US indicted five GRU Unit 26165 officers associated with

[APT28](<https://attack.mitre.org/groups/G0007>) for cyber operations (including close-access operations) conducted between 2014 and 2018 against the World Anti-Doping Agency (WADA), the US Anti-Doping Agency, a US nuclear facility, the Organization for the Prohibition of Chemical Weapons (OPCW), the Spiez Swiss Chemicals Laboratory, and other organizations.(Citation: US District Court Indictment GRU Oct 2018) Some of these were conducted with the assistance of GRU Unit 74455, which is also referred to as [Sandworm Team](<https://attack.mitre.org/groups/G0034>).

Equation - G0020

[Equation] (<https://attack.mitre.org/groups/G0020>) is a sophisticated threat group that employs multiple remote access tools. The group is known to use zero-day exploits and has developed the capability to overwrite the firmware of hard disk drives. (Citation: Kaspersky Equation QA)

Patchwork - G0040

[Patchwork](<https://attack.mitre.org/groups/G0040>) is a cyberespionage group that was first observed in December 2015. While the group has not been definitively attributed, circumstantial evidence suggests the group may be a pro-Indian or Indian entity. [Patchwork](<https://attack.mitre.org/groups/G0040>) has been seen targeting industries related to diplomatic and government agencies. Much of the code used by this group was copied and pasted from online forums. [Patchwork](<https://attack.mitre.org/groups/G0040>) was also seen operating spearphishing campaigns targeting U.S. think tank groups in March and April of 2018. (Citation: Cymmetria Patchwork) (Citation: Symantec Patchwork) (Citation: TrendMicro Patchwork Dec 2017) (Citation: Volexity Patchwork June 2018)

Carbanak - G0008

[Carbanak](<https://attack.mitre.org/groups/G0008>) is a threat group that mainly targets banks. It also refers to malware of the same name ([Carbanak](<https://attack.mitre.org/software/S0030>)). It is sometimes referred to as [FIN7](<https://attack.mitre.org/groups/G0046>), but these appear to be two groups using the same [Carbanak](<https://attack.mitre.org/software/S0030>) malware and are therefore tracked separately. Darkhotel - G0012

[Darkhotel](<https://attack.mitre.org/groups/G0012>) is a suspected South Korean threat group that has targeted victims primarily in East Asia since at least 2004. The group's name is based on cyber espionage operations conducted via hotel Internet networks against traveling executives and other select guests. [Darkhotel](<https://attack.mitre.org/groups/G0012>) has also conducted spearphishing campaigns and infected victims through peer-to-peer and file sharing networks.(Citation: Kaspersky Darkhotel)(Citation: Securelist Darkhotel Aug 2015)(Citation: Microsoft Digital Defense FY20 Sept 2020)

admin@338 - G0018

[admin@338](<https://attack.mitre.org/groups/G0018>) is a China-based cyber threat group. It has previously used newsworthy events as lures to deliver malware and has primarily targeted organizations involved in financial, economic, and trade policy, typically using publicly available RATs such as [PoisonIvy](<https://attack.mitre.org/software/S0012>), as well as some non-public backdoors. APT19 - G0073

[APT19](<https://attack.mitre.org/groups/G0073>) is a Chinese-based threat group that has targeted a variety of industries, including defense, finance, energy, pharmaceutical, telecommunications, high tech, education, manufacturing, and legal services. In 2017, a phishing campaign was used to target seven law and investment firms. (Citation: FireEye APT19) Some analysts track [APT19](<https://attack.mitre.org/groups/G0073>) and [Deep Panda](<https://attack.mitre.org/groups/G0009>) as the same group, but it is unclear from open source information if the groups are the same. Mofang - G0103

[Mofang](<https://attack.mitre.org/groups/G0103>) is a likely China-based cyber espionage group, named for its frequent practice of imitating a victim's infrastructure. This adversary has been observed since at least May 2012 conducting focused attacks against government and critical infrastructure in Myanmar, as well as several other countries and sectors including military, automobile, and weapons industries.(Citation: FOX-IT May 2016 Mofang)

Sharpshooter - G0104

Operation [Sharpshooter](<https://attack.mitre.org/groups/G0104>) is the name of a cyber espionage campaign discovered in October 2018 targeting nuclear, defense, energy, and financial companies.

Though overlaps between this adversary and [Lazarus Group](<https://attack.mitre.org/groups/G0032>) have been noted, definitive links have not been established.(Citation: McAfee Sharpshooter December 2018)

Rocke - G0106

[Rocke](<https://attack.mitre.org/groups/G0106>) is an alleged Chinese-speaking adversary whose primary objective appeared to be cryptojacking, or stealing victim system resources for the purposes of mining cryptocurrency. The name [Rocke](<https://attack.mitre.org/groups/G0106>) comes from the email address "rocke@live.cn" used to create the wallet which held collected cryptocurrency. Researchers have detected overlaps between [Rocke](<https://attack.mitre.org/groups/G0106>) and the Iron Cybercrime Group, though this attribution has not been confirmed.(Citation: Talos Rocke August 2018)

Silence - G0091

[Silence](<https://attack.mitre.org/groups/G0091>) is a financially motivated threat actor targeting financial institutions in different countries. The group was first seen in June 2016. Their main targets reside in Russia, Ukraine, Belarus, Azerbaijan, Poland and Kazakhstan. They compromised various banking systems, including the Russian Central Bank's Automated Workstation Client, ATMs, and card processing.(Citation: Cyber Forensicator Silence Jan 2019)(Citation: SecureList Silence Nov 2017)

APT3 - G0022

[APT3](<https://attack.mitre.org/groups/G0022>) is a China-based threat group that researchers have attributed to China's Ministry of State Security. (Citation: FireEye Clandestine Wolf) (Citation: Recorded Future APT3 May 2017) This group is responsible for the campaigns known as Operation Clandestine Fox, Operation Clandestine Wolf, and Operation Double Tap. (Citation: FireEye Clandestine Wolf) (Citation: FireEye Operation Double Tap) As of June 2015, the group appears to have shifted from targeting primarily US victims to primarily political organizations in Hong Kong. (Citation: Symantec Buckeye)

MITRE has also developed an APT3 Adversary Emulation Plan.(Citation: APT3 Adversary Emulation Plan)

APT38 - G0082

[APT38](<https://attack.mitre.org/groups/G0082>) is a financially-motivated threat group that is backed by the North Korean regime. The group mainly targets banks and financial institutions and has targeted more than 16 organizations in at least 13 countries since at least 2014.(Citation: FireEye APT38 Oct 2018)

North Korean group definitions are known to have significant overlap, and the name [Lazarus Group](<https://attack.mitre.org/groups/G0032>) is known to encompass a broad range of activity. Some organizations use the name Lazarus Group to refer to any activity attributed to North Korea.(Citation: US-CERT HIDDEN COBRA June 2017) Some organizations track North Korean clusters or groups such as Bluenoroff,(Citation: Kaspersky Lazarus Under The Hood Blog 2017) [APT37](<https://attack.mitre.org/groups/G0067>), and [APT38](<https://attack.mitre.org/groups/G0082>) separately, while other organizations may track some activity associated with those group names by the name Lazarus Group.

APT33 - G0064

[APT33](<https://attack.mitre.org/groups/G0064>) is a suspected Iranian threat group that has carried out operations since at least 2013. The group has targeted organizations across multiple industries in the United States, Saudi Arabia, and South Korea, with a particular interest in the aviation and energy sectors. (Citation: FireEye APT33 Sept 2017) (Citation: FireEye APT33 Webinar Sept 2017)

APT34 - G0057

APT34 is an Iranian cyber espionage group that has been active since at least 2014. The group has targeted a variety of industries, including financial, government, energy, chemical, and telecommunications, and has largely focused its operations within the Middle East. FireEye assesses that the group works on behalf of the Iranian government based on infrastructure details that contain references to Iran, use of Iranian infrastructure, and targeting that aligns with nation-state interests. APT34 loosely aligns with public reporting related to OilRig, but may not wholly align due to companies tracking threat groups in different ways. (Citation: FireEye APT34 Dec 2017)

Group5 - G0043

[Group5](<https://attack.mitre.org/groups/G0043>) is a threat group with a suspected Iranian nexus, though this attribution is not definite. The group has targeted individuals connected to the Syrian opposition via spearphishing and watering holes, normally using Syrian and Iranian themes. [Group5](<https://attack.mitre.org/groups/G0043>) has used two commonly available remote access tools (RATs), [njRAT](<https://attack.mitre.org/software/S0385>) and [NanoCore](<https://attack.mitre.org/software/S0336>), as well as an Android RAT, DroidJack. Dragonfly - G0035

[Dragonfly](<https://attack.mitre.org/groups/G0035>) is a cyber espionage group that has been active since at least 2011. They initially targeted defense and aviation companies but shifted to focus to include the energy sector in early 2013. They have also targeted companies related to industrial control systems. (Citation: Symantec Dragonfly)(Citation: Secureworks IRON LIBERTY July 2019)

A similar group emerged in 2015 and was identified by Symantec as [Dragonfly 2.0](<https://attack.mitre.org/groups/G0074>). There is debate over the extent of the overlap between [Dragonfly](<https://attack.mitre.org/groups/G0035>) and [Dragonfly 2.0](<https://attack.mitre.org/groups/G0074>), but there is sufficient evidence to lead to these being tracked as two separate groups. (Citation: Symantec Dragonfly Sept 2017)(Citation: Fortune Dragonfly 2.0 Sept 2017)(Citation: Dragos DYMALLOY)

APT37 - G0067

[APT37](<https://attack.mitre.org/groups/G0067>) is a suspected North Korean cyber espionage group that has been active since at least 2012. The group has targeted victims primarily in South Korea, but also in Japan, Vietnam, Russia, Nepal, China, India, Romania, Kuwait, and other parts of the Middle East. [APT37](<https://attack.mitre.org/groups/G0067>) has also been linked to following campaigns between 2016-2018: Operation Daybreak, Operation Erebus, Golden Time, Evil New Year, Are you Happy?, FreeMilk, Northern Korean Human Rights, and Evil New Year 2018. (Citation: FireEye APT37 Feb 2018) (Citation: Securelist ScarCruft Jun 2016) (Citation: Talos Group123)

North Korean group definitions are known to have significant overlap, and the name [Lazarus

Group](<https://attack.mitre.org/groups/G0032>) is known to encompass a broad range of activity. Some organizations use the name Lazarus Group to refer to any activity attributed to North Korea.(Citation: US-CERT HIDDEN COBRA June 2017) Some organizations track North Korean clusters or groups such as Bluenoroff,(Citation: Kaspersky Lazarus Under The Hood Blog 2017) [APT37](<https://attack.mitre.org/groups/G0067>), and [APT38](<https://attack.mitre.org/groups/G0082>) separately, while other organizations may track some activity associated with those group names by the name Lazarus Group.

FIN6 - G0037

[FIN6](<https://attack.mitre.org/groups/G0037>) is a cyber crime group that has stolen payment card data and sold it for profit on underground marketplaces. This group has aggressively targeted and compromised point of sale (PoS) systems in the hospitality and retail sectors.(Citation: FireEye FIN6 April 2016)(Citation: FireEye FIN6 Apr 2019)

GALLIUM - G0093

[GALLIUM](<https://attack.mitre.org/groups/G0093>) is a group that has been active since at least 2012, primarily targeting high-profile telecommunications networks. [GALLIUM](<https://attack.mitre.org/groups/G0093>) has been identified in some reporting as likely a Chinese state-sponsored group, based in part on tools used and TTPs commonly associated with Chinese threat actors.(Citation: Cybereason Soft Cell June 2019)(Citation: Microsoft GALLIUM December 2019)

FIN7 - G0046

[FIN7](<https://attack.mitre.org/groups/G0046>) is a financially-motivated threat group that has primarily targeted the U.S. retail, restaurant, and hospitality sectors since mid-2015. They often use point-of-sale malware. A portion of [FIN7](<https://attack.mitre.org/groups/G0046>) was run out of a front company called Combi Security. [FIN7](<https://attack.mitre.org/groups/G0046>) is sometimes referred to as [Carbanak](<https://attack.mitre.org/groups/G0008>) Group, but these appear to be two groups using the same [Carbanak](<https://attack.mitre.org/software/S0030>) malware and are therefore tracked separately. (Citation: FireEye FIN7 March 2017) (Citation: FireEye FIN7 April 2017) (Citation: FireEye CARBANAK June 2017) (Citation: FireEye FIN7 Aug 2018)

Kimsuky - G0094

[Kimsuky](<https://attack.mitre.org/groups/G0094>) is a North Korean-based threat group that has been active since at least September 2013. The group initially focused on targeting Korean think tanks and DPRK/nuclear-related targets, expanding recently to the United States, Russia, and Europe. The group was attributed as the actor behind the Korea Hydro & Nuclear Power Co. compromise.(Citation: EST Kimsuky April 2019)(Citation: BRI Kimsuky April 2019)(Citation: Cybereason Kimsuky November 2020)

OilRig - G0049

[OilRig](<https://attack.mitre.org/groups/G0049>) is a suspected Iranian threat group that has targeted Middle Eastern and international victims since at least 2014. The group has targeted a variety of industries, including financial, government, energy, chemical, and telecommunications, and has largely focused its operations within the Middle East. It appears the group carries out supply chain attacks, leveraging the trust relationship between organizations to attack their primary targets. FireEye assesses that the group works on behalf of the Iranian government based on infrastructure details that contain references to Iran, use of Iranian infrastructure, and targeting that aligns with nation-state interests. (Citation: Palo Alto OilRig April 2017) (Citation: ClearSky OilRig Jan 2017) (Citation: Palo Alto OilRig May 2016) (Citation: Palo Alto OilRig Oct 2016) (Citation: Unit 42 Playbook Dec 2017) (Citation: FireEye APT34 Dec 2017)(Citation: Unit 42 QUADAGENT July 2018) This group was previously tracked under two distinct groups, APT34 and OilRig, but was combined due to additional reporting giving higher confidence about the overlap of the activity.

NEODYMIUM - G0055

[NEODYMIUM](<https://attack.mitre.org/groups/G0055>) is an activity group that conducted a campaign in May 2016 and has heavily targeted Turkish victims. The group has demonstrated similarity to another activity group called [PROMETHIUM](<https://attack.mitre.org/groups/G0056>) due to overlapping victim and campaign characteristics. (Citation: Microsoft NEODYMIUM Dec 2016) (Citation: Microsoft SIR Vol 21) [NEODYMIUM](<https://attack.mitre.org/groups/G0055>) is reportedly associated closely with [BlackOasis](<https://attack.mitre.org/groups/G0063>) operations, but evidence that the group names are aliases has not been identified. (Citation: CyberScoop BlackOasis Oct 2017)

MuddyWater - G0069

[MuddyWater](<https://attack.mitre.org/groups/G0069>) is an Iranian threat group that has primarily targeted Middle Eastern nations, and has also targeted European and North American nations. The group's victims are mainly in the telecommunications, government (IT services), and oil sectors. Activity from this group was previously linked to [FIN7](<https://attack.mitre.org/groups/G0046>), but the group is believed to be a distinct group possibly motivated by espionage.(Citation: Unit 42 MuddyWater Nov 2017)(Citation: Symantec MuddyWater Dec 2018)(Citation: ClearSky MuddyWater Nov 2018)(Citation: ClearSky MuddyWater June 2019)(Citation: Reaqta MuddyWater November 2017)

Windigo - G0124

The [Windigo](<https://attack.mitre.org/groups/G0124>) group has been operating since at least 2011, compromising thousands of Linux and Unix servers using the [Ebury](<https://attack.mitre.org/software/S0377>) SSH backdoor to create a spam botnet. Despite law enforcement intervention against the creators, [Windigo](<https://attack.mitre.org/groups/G0124>) operators continued updating [Ebury](<https://attack.mitre.org/software/S0377>) through 2019.(Citation: ESET Windigo Mar 2014)(Citation: CERN Windigo June 2019)

China Chopper - S0020

[China Chopper](<https://attack.mitre.org/software/S0020>) is a [Web Shell](<https://attack.mitre.org/techniques/T1505/003>) hosted on Web servers to provide access back into an enterprise network that does not rely on an infected system calling back to a remote command and control server. (Citation: Lee 2013) It has been used by several threat groups. (Citation: Dell TG-3390) (Citation: FireEye Periscope March 2018)

Cobalt Strike - S0154

[Cobalt Strike](<https://attack.mitre.org/software/S0154>) is a commercial, full-featured, remote access tool that bills itself as “adversary simulation software designed to execute targeted attacks and emulate the post-exploitation actions of advanced threat actors”. Cobalt Strike’s interactive post-exploit capabilities cover the full range of ATT&CK tactics, all executed within a single, integrated system.(Citation: cobaltstrike manual)

In addition to its own capabilities, [Cobalt Strike](<https://attack.mitre.org/software/S0154>) leverages the capabilities of other well-known tools such as Metasploit and [Mimikatz](<https://attack.mitre.org/software/S0002>). (Citation: cobaltstrike manual)

Stealth Mango - S0328

[Stealth Mango](<https://attack.mitre.org/software/S0328>) is Android malware that has reportedly been used to successfully compromise the mobile devices of government officials, members of the military, medical professionals, and civilians. The iOS malware known as [Tangelo](<https://attack.mitre.org/software/S0329>) is believed to be from the same developer. (Citation: Lookout-StealthMango)

Olympic Destroyer - S0365

[Olympic Destroyer](<https://attack.mitre.org/software/S0365>) is malware that was used by [Sandworm Team](<https://attack.mitre.org/groups/G0034>) against the 2018 Winter Olympics, held in Pyeongchang, South Korea. The main purpose of the malware was to render infected computer systems inoperable. The malware leverages various native Windows utilities and API calls to carry out its destructive tasks. [Olympic Destroyer](<https://attack.mitre.org/software/S0365>) has worm-like features to spread itself across a computer network in order to maximize its destructive impact.(Citation: Talos Olympic Destroyer 2018)(Citation: US District Court Indictment GRU Unit 74455 October 2020)

Rising Sun - S0448

[Rising Sun](<https://attack.mitre.org/software/S0448>) is a modular backdoor malware used extensively in Operation [Sharpshooter](<https://attack.mitre.org/groups/G0104>). The malware has been observed targeting nuclear, defense, energy, and financial services companies across the world. [Rising Sun](<https://attack.mitre.org/software/S0448>) uses source code from [Lazarus Group](<https://attack.mitre.org/groups/G0032>)'s Trojan Duuzer.(Citation: McAfee Sharpshooter December 2018)

WEBC2 - S0109

[WEBC2](<https://attack.mitre.org/software/S0109>) is a family of backdoor malware used by [APT1](<https://attack.mitre.org/groups/G0006>) as early as July 2006. [WEBC2](<https://attack.mitre.org/software/S0109>) backdoors are designed to retrieve a webpage, with commands hidden in HTML comments or special tags, from a predetermined C2 server.

Shamoon - S0140

[Shamoon](<https://attack.mitre.org/software/S0140>) is wiper malware that was first used by an Iranian group known as the "Cutting Sword of Justice" in 2012. Other versions known as Shamoon 2 and Shamoon 3 were observed in 2016 and 2018. [Shamoon](<https://attack.mitre.org/software/S0140>) has also been seen leveraging [RawDisk](<https://attack.mitre.org/software/S0364>) and Filerase to carry out data wiping tasks. The term Shamoon is sometimes used to refer to the group using the malware as well as the malware itself.(Citation: Palo Alto Shamoon Nov 2016)(Citation: Unit 42 Shamoon3 2018)(Citation: Symantec Shamoon 2012)(Citation: FireEye Shamoon Nov 2016)

CHOPSTICK - S0023

[CHOPSTICK](<https://attack.mitre.org/software/S0023>) is a malware family of modular backdoors used by [APT28](<https://attack.mitre.org/groups/G0007>). It has been used since at least 2012 and is usually dropped on victims as second-stage malware, though it has been used as first-stage malware in several cases. It has both Windows and Linux variants. (Citation: FireEye APT28) (Citation: ESET Sednit Part 2) (Citation: FireEye APT28 January 2017) (Citation: DOJ GRU Indictment Jul 2018) It is tracked separately from the [X-Agent for Android](<https://attack.mitre.org/software/S0314>).

InvisiMole - S0260

[InvisiMole](<https://attack.mitre.org/software/S0260>) is a modular spyware program that has been used by the InvisiMole Group since at least 2013. [InvisiMole](<https://attack.mitre.org/software/S0260>) has two backdoor modules called RC2FM and RC2CL that are used to perform post-exploitation activities. It has been discovered on compromised victims in the Ukraine and Russia. [Gamaredon Group](<https://attack.mitre.org/groups/G0047>) infrastructure has been used to download and execute [InvisiMole](<https://attack.mitre.org/software/S0260>) against a small number of victims.(Citation: ESET InvisiMole June 2018)(Citation: ESET InvisiMole June 2020)

Pisloader - S0124

[Pisloader](<https://attack.mitre.org/software/S0124>) is a malware family that is notable due to its use of DNS as a C2 protocol as well as its use of anti-analysis tactics. It has been used by [APT18](<https://attack.mitre.org/groups/G0026>) and is similar to another malware family, [HTTPBrowser](<https://attack.mitre.org/software/S0070>), that has been used by the group. (Citation: Palo Alto DNS Requests)

ComRAT - S0126

[ComRAT](<https://attack.mitre.org/software/S0126>) is a second stage implant suspected of being a descendant of [Agent.btz](<https://attack.mitre.org/software/S0092>) and used by [Turla](<https://attack.mitre.org/groups/G0010>). The first version of [ComRAT](<https://attack.mitre.org/software/S0126>) was identified in 2007, but the tool has undergone substantial development for many years since.(Citation: Symantec Waterbug)(Citation: NorthSec 2015 GData Uroburos Tools)(Citation: ESET ComRAT May 2020)

FinFisher - S0182

[FinFisher](<https://attack.mitre.org/software/S0182>) is a government-grade commercial surveillance spyware reportedly sold exclusively to government agencies for use in targeted and lawful criminal investigations. It is heavily obfuscated and uses multiple anti-analysis techniques. It has other variants including [Wingbird](<https://attack.mitre.org/software/S0176>). Grandoreiro - S0531

[Grandoreiro](<https://attack.mitre.org/software/S0531>) is a banking trojan written in Delphi that was first observed in 2016 and uses a Malware-as-a-Service (MaaS) business model. [Grandoreiro](<https://attack.mitre.org/software/S0531>) has confirmed victims in Brazil, Mexico, Portugal, and Spain.(Citation: Securelist Brazilian Banking Malware July 2020)(Citation: ESET Grandoreiro April 2020)

SimBad - S0419

[SimBad](<https://attack.mitre.org/software/S0419>) was a strain of adware on the Google Play Store, distributed through the RXDroider Software Development Kit. The name "SimBad" was derived from the fact that most of the infected applications were simulator games. The adware was controlled using an instance of the open source framework Parse Server.(Citation: CheckPoint SimBad 2019)

PoetRAT - S0428

[PoetRAT](<https://attack.mitre.org/software/S0428>) is a remote access trojan (RAT) that was first identified in April 2020. [PoetRAT](<https://attack.mitre.org/software/S0428>) has been used in multiple campaigns against the private and public sectors in Azerbaijan, including ICS and SCADA systems in the energy sector. The STIBNITE activity group has been observed using the malware. [PoetRAT](<https://attack.mitre.org/software/S0428>) derived its name from references in the code to poet William Shakespeare. (Citation: Talos PoetRAT April 2020)(Citation: Talos PoetRAT October 2020)(Citation: Dragos Threat Report 2020)

Mosquito - S0256

[Mosquito](<https://attack.mitre.org/software/S0256>) is a Win32 backdoor that has been used by [Turla](<https://attack.mitre.org/groups/G0010>). [Mosquito](<https://attack.mitre.org/software/S0256>) is made up of three parts: the installer, the launcher, and the backdoor. The main backdoor is called CommanderDLL and is launched by the loader program. (Citation: ESET Turla Mosquito Jan 2018)

TrickBot - S0266

[TrickBot](<https://attack.mitre.org/software/S0266>) is a Trojan spyware program that has mainly been used for targeting banking sites in United States, Canada, UK, Germany, Australia, Austria, Ireland, London, Switzerland, and Scotland. TrickBot first emerged in the wild in September 2016 and appears to be a successor to [Dyre](<https://attack.mitre.org/software/S0024>). [TrickBot](<https://attack.mitre.org/software/S0266>) is developed in the C++ programming language. NOKKI - S0353

[NOKKI](<https://attack.mitre.org/software/S0353>) is a modular remote access tool. The earliest observed attack using [NOKKI](<https://attack.mitre.org/software/S0353>) was in January 2018. [NOKKI](<https://attack.mitre.org/software/S0353>) has significant code overlap with the [KONNI](<https://attack.mitre.org/software/S0356>) malware family. There is some evidence potentially linking [NOKKI](<https://attack.mitre.org/software/S0353>) to [APT37](<https://attack.mitre.org/groups/G0067>). (Citation: Unit 42 NOKKI Sept 2018)(Citation: Unit 42 Nokki Oct 2018)

PLEAD - S0435

[PLEAD](<https://attack.mitre.org/software/S0435>) is a remote access tool (RAT) and downloader used by [BlackTech](<https://attack.mitre.org/groups/G0098>) in targeted attacks in East Asia including Taiwan, Japan, and Hong Kong.(Citation: TrendMicro BlackTech June 2017)(Citation: JPCert PLEAD Downloader June 2018) [PLEAD](<https://attack.mitre.org/software/S0435>) has also been referred to as [TSCookie](<https://attack.mitre.org/software/S0436>), though more recent reporting indicates likely separation between the two.(Citation: JPCert TSCookie March 2018)(Citation: JPCert PLEAD Downloader June 2018)

Bazar - S0534

[Bazar](<https://attack.mitre.org/software/S0534>) is a downloader and backdoor malware in use since at least April 2020, with infections mainly targeting professional services, healthcare, manufacturing, IT, logistics and travel companies across the US and Europe. [Bazar](<https://attack.mitre.org/software/S0534>) has been reported to have ties to [TrickBot](<https://attack.mitre.org/software/S0266>) campaigns and can be used to deploy additional malware, including ransomware, and to steal sensitive data.(Citation: Cybereason Bazar July 2020)

GoldenSpy - S0493

[GoldenSpy](<https://attack.mitre.org/software/S0493>) is a backdoor malware which has been packaged with legitimate tax preparation software. [GoldenSpy](<https://attack.mitre.org/software/S0493>) was discovered targeting organizations in China, being delivered with the "Intelligent Tax" software suite which is produced by the Golden Tax Department of Aisino Credit Information Co. and required to pay local taxes.(Citation: Trustwave GoldenSpy June 2020)

ECCENTRICBANDWAGON - S0593

[ECCENTRICBANDWAGON](<https://attack.mitre.org/software/S0593>) is a Remote Access Tool (RAT) used by [Lazarus Group](<https://attack.mitre.org/groups/G0032>) that was first identified in August 2020. It is a reconnaissance tool—with keylogging and screen capture functionality—used for information gathering on compromised systems.(Citation: CISA EB Aug 2020)

NotPetya - S0368

[NotPetya](<https://attack.mitre.org/software/S0368>) is malware that was used by [Sandworm Team](<https://attack.mitre.org/groups/G0034>) in a worldwide attack starting on June 27, 2017. While [NotPetya](<https://attack.mitre.org/software/S0368>) appears as a form of ransomware, its main purpose was to destroy data and disk structures on compromised systems; the attackers never intended to make the encrypted data recoverable. As such, [NotPetya](<https://attack.mitre.org/software/S0368>) may be more appropriately thought of as a form of wiper malware. [NotPetya](<https://attack.mitre.org/software/S0368>) contains worm-like features to spread itself across a computer network using the SMBv1 exploits EternalBlue and EternalRomance.(Citation: Talos Nyetya June 2017)(Citation: US-CERT NotPetya 2017)(Citation: ESET Telebots June 2017)(Citation: US District Court Indictment GRU Unit 74455 October 2020)

Carberp - S0484

[Carberp](<https://attack.mitre.org/software/S0484>) is a credential and information stealing malware that has been active since at least 2009. [Carberp](<https://attack.mitre.org/software/S0484>)'s source code was leaked online in 2013, and subsequently used as the foundation for the [Carbanak](<https://attack.mitre.org/software/S0030>) backdoor.(Citation: Trend Micro Carberp February 2014)(Citation: KasperskyCarbanak)(Citation: RSA Carbanak November 2017)

Maze - S0449

[Maze](<https://attack.mitre.org/software/S0449>) ransomware, previously known as "ChaCha", was discovered in May 2019. In addition to encrypting files on victim machines for impact, [Maze](<https://attack.mitre.org/software/S0449>) operators conduct information stealing campaigns prior to encryption and post the information online to extort affected companies.(Citation: FireEye Maze May 2020)(Citation: McAfee Maze March 2020)(Citation: Sophos Maze VM September 2020)

BlackMould - S0564

[BlackMould](<https://attack.mitre.org/software/S0564>) is a web shell based on [China Chopper](<https://attack.mitre.org/software/S0020>) for servers running Microsoft IIS. First reported in December 2019, it has been used in malicious campaigns by [GALLIUM](<https://attack.mitre.org/groups/G0093>) against telecommunication providers.(Citation: Microsoft GALLIUM December 2019)

Mandrake - S0485

[Mandrake](<https://attack.mitre.org/software/S0485>) is a sophisticated Android espionage platform that has been active in the wild since at least 2016. [Mandrake](<https://attack.mitre.org/software/S0485>) is very actively maintained, with sophisticated features and attacks that are executed with surgical precision.

[Mandrake](<https://attack.mitre.org/software/S0485>) has gone undetected for several years by providing legitimate, ad-free applications with social media and real reviews to back the apps. The malware is only activated when the operators issue a specific command.(Citation: Bitdefender Mandrake)

Conti - S0575

[Conti](<https://attack.mitre.org/software/S0575>) is a Ransomware-as-a-Service that was first observed in December 2019, and has being distributed via [TrickBot](<https://attack.mitre.org/software/S0266>). It has been used against major corporations and government agencies, particularly those in North America. As with other ransomware families, actors using [Conti](<https://attack.mitre.org/software/S0575>) steal sensitive files and information from compromised networks, and threaten to publish this data unless the ransom is paid.(Citation: Cybereason Conti Jan 2021)(Citation: CarbonBlack Conti July 2020)(Citation: Cybleinc Conti January 2020)

ThiefQuest - S0595

[ThiefQuest](<https://attack.mitre.org/software/S0595>) is a virus, data stealer, and wiper that presents itself as ransomware targeting macOS systems. [ThiefQuest](<https://attack.mitre.org/software/S0595>) was first seen in 2020 distributed via trojanized pirated versions of popular macOS software on Russian forums sharing torrent links.(Citation: Reed thiefquest fake ransom) Even though [ThiefQuest](<https://attack.mitre.org/software/S0595>) presents itself as ransomware, since the dynamically generated encryption key is never sent to the attacker it may be more appropriately thought of as a form of wiper malware.(Citation: wardle evilquest partii)(Citation: reed thiefquest ransomware analysis)

Invoke-PSImage - S0231

[Invoke-PSImage](<https://attack.mitre.org/software/S0231>) takes a PowerShell script and embeds the bytes of the script into the pixels of a PNG image. It generates a one liner for executing either from a file or from the web. Example of usage is embedding the PowerShell code from the Invoke-Mimikatz module and embed it into an image file. By calling the image file from a macro for example, the macro will download the picture and execute the PowerShell code, which in this case will dump the passwords. (Citation: GitHub Invoke-PSImage)

Tor - S0183

[Tor](<https://attack.mitre.org/software/S0183>) is a software suite and network that provides increased anonymity on the Internet. It creates a multi-hop proxy network and utilizes multilayer encryption to protect both the message and routing information. [Tor](<https://attack.mitre.org/software/S0183>) utilizes "Onion Routing," in which messages are encrypted with multiple layers of encryption; at each step in the proxy network, the topmost layer is decrypted and the contents forwarded on to the next node until it reaches its destination. RawDisk - S0364

[RawDisk](<https://attack.mitre.org/software/S0364>) is a legitimate commercial driver from the EldoS Corporation that is used for interacting with files, disks, and partitions. The driver allows for direct modification of data on a local computer's hard drive. In some cases, the tool can enact these raw disk modifications from user-mode processes, circumventing Windows operating system security features.(Citation: EldoS RawDisk ITpro)(Citation: Novetta Blockbuster Destructive Malware)

Central Security Treatment Organization

Ransomware

The tag is: *misp-galaxy:ransomware="Central Security Treatment Organization"*

Central Security Treatment Organization has relationships with:

- similar: misp-galaxy:ransomware="CryLocker" with estimative-language:likelihood-probability="likely"
- similar: misp-galaxy:malpedia="CryLocker" with estimative-language:likelihood-probability="likely"

Cerber

Ransomware

The tag is: *misp-galaxy:ransomware="Cerber"*

Cerber is also known as:

- CRBR ENCRYPTOR

Cerber has relationships with:

- similar: misp-galaxy:malpedia="Cerber" with estimative-language:likelihood-probability="likely"

Table 5234. Table References

CryLocker

Ransomware Identifies victim locations w/Google Maps API

The tag is: *misp-galaxy:ransomware="CryLocker"*

CryLocker is also known as:

- Cry
- CSTO
- Central Security Treatment Organization

CryLocker has relationships with:

- similar: `misp-galaxy:ransomware="Central Security Treatment Organization"` with `estimative-language:likelihood-probability="likely"`
- similar: `misp-galaxy:malpedia="CryLocker"` with `estimative-language:likelihood-probability="likely"`

CryptoFinancial

Ransomware

The tag is: *misp-galaxy:ransomware="CryptoFinancial"*

CryptoFinancial is also known as:

- Ranscam

CryptoFinancial has relationships with:

- similar: `misp-galaxy:malpedia="Ranscam"` with `estimative-language:likelihood-probability="likely"`

Table 5251. Table References

https://id-ransomware.blogspot.com/search?q=CryptoFinancial

CryptoFortress

Ransomware Mimics Torrentlocker. Encrypts only 50% of each file up to 5 MB

The tag is: `misp-galaxy:ransomware="CryptoFortress"`

CryptoFortress has relationships with:

- similar: `misp-galaxy:ransomware="TorrentLocker"` with `estimative-language:likelihood-probability="likely"`
- similar: `misp-galaxy:malpedia="CryptoFortress"` with `estimative-language:likelihood-probability="likely"`
- similar: `misp-galaxy:malpedia="TorrentLocker"` with `estimative-language:likelihood-probability="likely"`

Table 5252. Table References

CryptoGraphic Locker

Ransomware Has a GUI. Subvariants: CoinVault BitCryptor

The tag is: `misp-galaxy:ransomware="CryptoGraphic Locker"`

CryptoHost

Ransomware RAR's victim's files has a GUI

The tag is: `misp-galaxy:ransomware="CryptoHost"`

CryptoHost is also known as:

- Manamecrypt
- Telograph
- ROI Locker

CryptoHost has relationships with:

- similar: `misp-galaxy:malpedia="ManameCrypt"` with `estimative-language:likelihood-probability="likely"`

Table 5253. Table References

CryptoJoker

Ransomware

The tag is: `misp-galaxy:ransomware="CryptoJoker"`

CryptoJoker has relationships with:

- similar: `misp-galaxy:ransomware="CryptoNar"` with `estimative-language:likelihood-probability="likely"`

Table 5254. Table References

Links
https://id-ransomware.blogspot.com/2017/07/cryptojoker-2017-ransomware.html

CryptoLocker

Ransomware no longer relevant

The tag is: `misp-galaxy:ransomware="CryptoLocker"`

CryptoLocker has relationships with:

- similar: `misp-galaxy:malpedia="CryptoLocker"` with `estimative-language:likelihood-probability="likely"`

Table 5255. Table References

CryptoMix

Ransomware

The tag is: *misp-galaxy:ransomware="CryptoMix"*

CryptoMix is also known as:

- Zeta

CryptoMix has relationships with:

- similar: *misp-galaxy:malpedia="CryptoMix"* with *estimative-language:likelihood-probability="likely"*
- similar: *misp-galaxy:ransomware="CryptoMix-0000"* with *estimative-language:likelihood-probability="likely"*
- similar: *misp-galaxy:ransomware="CryptoMix-Arena"* with *estimative-language:likelihood-probability="likely"*
- similar: *misp-galaxy:ransomware="CryptoMix-Azer"* with *estimative-language:likelihood-probability="likely"*
- similar: *misp-galaxy:ransomware="CryptoMix-Backup"* with *estimative-language:likelihood-probability="likely"*
- similar: *misp-galaxy:ransomware="CryptoMix-CK"* with *estimative-language:likelihood-*

probability="likely"

- similar: misp-galaxy:ransomware="CryptoMix-Coban" with estimative-language:likelihood-probability="likely"
- similar: misp-galaxy:ransomware="CryptoMix-DLL" with estimative-language:likelihood-probability="likely"
- similar: misp-galaxy:ransomware="CryptoMix-Empty" with estimative-language:likelihood-probability="likely"
- similar: misp-galaxy:ransomware="CryptoMix-Error" with estimative-language:likelihood-probability="likely"
- similar: misp-galaxy:ransomware="CryptoMix-Exte" with estimative-language:likelihood-probability="likely"
