## Stealth Falcon - G0038

[Stealth Falcon](<https://attack.mitre.org/groups/G0038>) is a threat group that has conducted targeted spyware attacks against Emirati journalists, activists, and dissidents since at least 2012. Circumstantial evidence suggests there could be a link between this group and the United Arab Emirates (UAE) government, but that has not been confirmed. (Citation: Citizen Lab Stealth Falcon May 2016)

## Gamaredon Group - G0047

[Gamaredon Group](<https://attack.mitre.org/groups/G0047>) is a suspected Russian cyber espionage threat group that has targeted military, NGO, judiciary, law enforcement, and non-profit organizations in Ukraine since at least 2013. The name [Gamaredon Group](<https://attack.mitre.org/groups/G0047>) comes from a misspelling of the word "Armageddon", which was detected in the adversary's early campaigns.(Citation: Palo Alto Gamaredon Feb 2017)(Citation: TrendMicro Gamaredon April 2020)(Citation: ESET Gamaredon June 2020)(Citation: Symantec Shuckworm January 2022)(Citation: Microsoft Actinium February 2022)

In November 2021, the Ukrainian government publicly attributed [Gamaredon Group](<https://attack.mitre.org/groups/G0047>) to Russia's Federal Security Service (FSB) Center 18.(Citation: Bleepingcomputer Gamardeon FSB November 2021)(Citation: Microsoft Actinium

## Magic Hound - G0059

[Magic Hound](<https://attack.mitre.org/groups/G0059>) is an Iranian-sponsored threat group that conducts long term, resource-intensive cyber espionage operations, likely on behalf of the Islamic Revolutionary Guard Corps. They have targeted U.S. and Middle Eastern government and military personnel, academics, journalists, and organizations such as the World Health Organization (WHO), via complex social engineering campaigns since at least 2014.(Citation: FireEye APT35 2018)(Citation: ClearSky Kittens Back 3 August 2020)(Citation: Certfa Charming Kitten January 2021)(Citation: Secureworks COBALT ILLUSION Threat Profile)(Citation: Proofpoint TA453 July2021)

## Operation Wocao - G0116

[Operation Wocao](<https://attack.mitre.org/groups/G0116>) described activities carried out by a China-based cyber espionage adversary. [Operation Wocao](<https://attack.mitre.org/groups/G0116>) targeted entities within the government, managed service providers, energy, health care, and technology sectors across several countries, including China, France, Germany, the United Kingdom, and the United States. [Operation Wocao](<https://attack.mitre.org/groups/G0116>) used similar TTPs and tools to APT20, suggesting a possible overlap.(Citation: FoxIT Wocao December 2019)

## Axiom - G0001

[Axiom](<https://attack.mitre.org/groups/G0001>) is a suspected Chinese cyber espionage group that has targeted the aerospace, defense, government, manufacturing, and media sectors since at least 2008. Some reporting suggests a degree of overlap between [Axiom](<https://attack.mitre.org/groups/G0001>) and [Winnti Group](<https://attack.mitre.org/groups/G0044>) but the two groups appear to be distinct based on differences in reporting on TTPs and targeting.(Citation: Kaspersky Winnti April 2013)(Citation: Kaspersky Winnti June 2015)(Citation: Novetta Winnti April 2015)

## Turla - G0010

[Turla](<https://attack.mitre.org/groups/G0010>) is a Russian-based threat group that has infected victims in over 45 countries, spanning a range of industries including government, embassies, military, education, research and pharmaceutical companies since 2004. Heightened activity was seen in mid-2015. [Turla](<https://attack.mitre.org/groups/G0010>) is known for conducting watering hole and spearphishing campaigns and leveraging in-house tools and malware. [Turla](<https://attack.mitre.org/groups/G0010>)'s espionage platform is mainly used against Windows machines, but has also been seen used against macOS and Linux machines.(Citation: Kaspersky Turla)(Citation: ESET Gazer Aug 2017)(Citation: CrowdStrike VENOMOUS BEAR)(Citation: ESET Turla Mosquito Jan 2018)

## APT32 - G0050

[APT32](<https://attack.mitre.org/groups/G0050>) is a suspected Vietnam-based threat group that has been active since at least 2014. The group has targeted multiple private sector industries as well as foreign governments, dissidents, and journalists with a strong focus on Southeast Asian countries like Vietnam, the Philippines, Laos, and Cambodia. They have extensively used strategic web compromises to compromise victims.(Citation: FireEye APT32 May 2017)(Citation: Volexity OceanLotus Nov 2017)(Citation: ESET OceanLotus)

## TA505 - G0092

[TA505](<https://attack.mitre.org/groups/G0092>) is a financially motivated threat group that has been active since at least 2014. The group is known for frequently changing malware and driving global trends in criminal malware distribution.(Citation: Proofpoint TA505 Sep 2017)(Citation: Proofpoint TA505 June 2018)(Citation: Proofpoint TA505 Jan 2019)

## APT28 - G0007

[APT28](<https://attack.mitre.org/groups/G0007>) is a threat group that has been attributed to Russia's General Staff Main Intelligence Directorate (GRU) 85th Main Special Service Center (GTsSS) military unit 26165.(Citation: NSA/FBI Drovorub August 2020) This group has been active since at least 2004.(Citation: DOJ GRU Indictment Jul 2018) (Citation: Ars Technica GRU indictment Jul 2018) (Citation: Crowdstrike DNC June 2016) (Citation: FireEye APT28) (Citation: SecureWorks TG-4127) (Citation: FireEye APT28 January 2017) (Citation: GRIZZLY STEPPE JAR) (Citation: Sofacy DealersChoice) (Citation: Palo Alto Sofacy 06-2018) (Citation: Symantec APT28 Oct 2018) (Citation: ESET Zebrocy May 2019)

[APT28](<https://attack.mitre.org/groups/G0007>) reportedly compromised the Hillary Clinton

campaign, the Democratic National Committee, and the Democratic Congressional Campaign Committee in 2016 in an attempt to interfere with the U.S. presidential election. (Citation: CrowdStrike DNC June 2016) In 2018, the US indicted five GRU Unit 26165 officers associated with [APT28](<https://attack.mitre.org/groups/G0007>) for cyber operations (including close-access operations) conducted between 2014 and 2018 against the World Anti-Doping Agency (WADA), the US Anti-Doping Agency, a US nuclear facility, the Organization for the Prohibition of Chemical Weapons (OPCW), the Spiez Swiss Chemicals Laboratory, and other organizations.(Citation: US District Court Indictment GRU Oct 2018) Some of these were conducted with the assistance of GRU Unit 74455, which is also referred to as [Sandworm Team](<https://attack.mitre.org/groups/G0034>).

## Equation - G0020

[Equation](<https://attack.mitre.org/groups/G0020>) is a sophisticated threat group that employs multiple remote access tools. The group is known to use zero-day exploits and has developed the capability to overwrite the firmware of hard disk drives. (Citation: Kaspersky Equation QA)

## Moafee - G0002

[Moafee](<https://attack.mitre.org/groups/G0002>) is a threat group that appears to operate from the Guandong Province of China. Due to overlapping TTPs, including similar custom tools, Moafee is thought to have a direct or indirect relationship with the threat group [DragonOK](<https://attack.mitre.org/groups/G0017>). (Citation: Haq 2014)

## Ke3chang - G0004

[Ke3chang](<https://attack.mitre.org/groups/G0004>) is a threat group attributed to actors operating out of China. [Ke3chang](<https://attack.mitre.org/groups/G0004>) has targeted oil, government, diplomatic, military, and NGOs in Central and South America, the Caribbean, Europe, and North America since at least 2010.(Citation: Mandiant Operation Ke3chang November 2014)(Citation: NCC Group APT15 Alive and Strong)(Citation: APT15 Intezer June 2018)(Citation: Microsoft NICKEL

## Cleaver - G0003

[Cleaver](<https://attack.mitre.org/groups/G0003>) is a threat group that has been attributed to Iranian actors and is responsible for activity tracked as Operation Cleaver. (Citation: Cylance Cleaver) Strong circumstantial evidence suggests Cleaver is linked to Threat Group 2889 (TG-2889). (Citation: Dell Threat Group 2889)

## Patchwork - G0040

[Patchwork](<https://attack.mitre.org/groups/G0040>) is a cyberespionage group that was first observed in December 2015. While the group has not been definitively attributed, circumstantial evidence suggests the group may be a pro-Indian or Indian entity. [Patchwork](<https://attack.mitre.org/groups/G0040>) has been seen targeting industries related to diplomatic and government agencies. Much of the code used by this group was copied and pasted from online forums. [Patchwork](<https://attack.mitre.org/groups/G0040>) was also seen operating spearphishing campaigns targeting U.S. think tank groups in March and April of 2018. (Citation: Cymmetria Patchwork) (Citation: Symantec Patchwork) (Citation: TrendMicro Patchwork Dec 2017) (Citation: Volexity Patchwork June 2018)

## Darkhotel - G0012

[Darkhotel](<https://attack.mitre.org/groups/G0012>) is a suspected South Korean threat group that has targeted victims primarily in East Asia since at least 2004. The group's name is based on cyber espionage operations conducted via hotel Internet networks against traveling executives and other select guests. [Darkhotel](<https://attack.mitre.org/groups/G0012>) has also conducted spearphishing campaigns and infected victims through peer-to-peer and file sharing networks.(Citation: Kaspersky Darkhotel)(Citation: Securelist Darkhotel Aug 2015)(Citation: Microsoft Digital Defense FY20 Sept 2020)

## admin@338 - G0018

[admin@338](<https://attack.mitre.org/groups/G0018>) is a China-based cyber threat group. It has previously used newsworthy events as lures to deliver malware and has primarily targeted organizations involved in financial, economic, and trade policy, typically using publicly available RATs such as [PoisonIvy](<https://attack.mitre.org/software/S0012>), as well as some non-public backdoors. ## APT19 - G0073

[APT19](<https://attack.mitre.org/groups/G0073>) is a Chinese-based threat group that has targeted a variety of industries, including defense, finance, energy, pharmaceutical, telecommunications, high tech, education, manufacturing, and legal services. In 2017, a phishing campaign was used to target seven law and investment firms. (Citation: FireEye APT19) Some analysts track [APT19](<https://attack.mitre.org/groups/G0073>) and [Deep Panda](<https://attack.mitre.org/groups/G0009>) as the same group, but it is unclear from open source information if the groups are the same. ## Mofang - G0103

[Mofang](<https://attack.mitre.org/groups/G0103>) is a likely China-based cyber espionage group, named for its frequent practice of imitating a victim's infrastructure. This adversary has been observed since at least May 2012 conducting focused attacks against government and critical infrastructure in Myanmar, as well as several other countries and sectors including military, automobile, and weapons industries.(Citation: FOX-IT May 2016 Mofang)

## APT41 - G0096

[APT41](<https://attack.mitre.org/groups/G0096>) is a threat group that researchers have assessed as Chinese state-sponsored espionage group that also conducts financially-motivated operations. Active since at least 2012, [APT41](<https://attack.mitre.org/groups/G0096>) has been observed targeting healthcare, telecom, technology, and video game industries in 14 countries. [APT41](<https://attack.mitre.org/groups/G0096>) overlaps at least partially with public reporting on groups including BARIUM and [Winnti Group](<https://attack.mitre.org/groups/G0044>). (Citation: FireEye APT41 Aug 2019)(Citation: Group IB APT 41 June 2021)

# Sharpshooter - G0104

Operation [Sharpshooter](<https://attack.mitre.org/groups/G0104>) is the name of a cyber espionage campaign discovered in October 2018 targeting nuclear, defense, energy, and financial companies. Though overlaps between this adversary and [Lazarus Group](<https://attack.mitre.org/groups/G0032>) have been noted, definitive links have not been established.(Citation: McAfee Sharpshooter December 2018)

## Rocke - G0106

[Rocke](<https://attack.mitre.org/groups/G0106>) is an alleged Chinese-speaking adversary whose primary objective appeared to be cryptojacking, or stealing victim system resources for the purposes of mining cryptocurrency. The name [Rocke](<https://attack.mitre.org/groups/G0106>) comes from the email address "rocke@live.cn" used to create the wallet which held collected cryptocurrency. Researchers have detected overlaps between [Rocke](<https://attack.mitre.org/groups/G0106>) and the Iron Cybercrime Group, though this attribution has not been confirmed.(Citation: Talos Rocke August 2018)

## DragonOK - G0017

[DragonOK](<https://attack.mitre.org/groups/G0017>) is a threat group that has targeted Japanese organizations with phishing emails. Due to overlapping TTPs, including similar custom tools, [DragonOK](<https://attack.mitre.org/groups/G0017>) is thought to have a direct or indirect relationship with the threat group [Moafee](<https://attack.mitre.org/groups/G0002>). (Citation: Operation Quantum Entanglement) It is known to use a variety of malware, including Sysget/HelloBridge, PlugX, PoisonIvy, FormerFirstRat, NFlog, and NewCT. (Citation: New DragonOK)

## Whitefly - G0107

[Whitefly](<https://attack.mitre.org/groups/G0107>) is a cyber espionage group that has been operating since at least 2017. The group has targeted organizations based mostly in Singapore across a wide variety of sectors, and is primarily interested in stealing large amounts of sensitive information. The group has been linked to an attack against Singapore's largest public health organization, SingHealth.(Citation: Symantec Whitefly March 2019)

## Naikon - G0019

[Naikon](<https://attack.mitre.org/groups/G0019>) is assessed to be a state-sponsored cyber espionage group attributed to the Chinese People's Liberation Army's (PLA) Chengdu Military Region Second Technical Reconnaissance Bureau (Military Unit Cover Designator 78020).(Citation: CameraShy) Active since at least 2010, [Naikon](<https://attack.mitre.org/groups/G0019>) has primarily conducted operations against government, military, and civil organizations in Southeast Asia, as well as against international bodies such as the United Nations Development Programme (UNDP) and the Association of Southeast Asian Nations (ASEAN).(Citation: CameraShy)(Citation: Baumgartner Naikon 2015)

While [Naikon](<https://attack.mitre.org/groups/G0019>) shares some characteristics with [APT30](<https://attack.mitre.org/groups/G0013>), the two groups do not appear to be exact matches.(Citation: Baumgartner Golovkin Naikon 2015)

# Silence - G0091

[Silence](<https://attack.mitre.org/groups/G0091>) is a financially motivated threat actor targeting financial institutions in different countries. The group was first seen in June 2016. Their main targets reside in Russia, Ukraine, Belarus, Azerbaijan, Poland and Kazakhstan. They compromised various banking systems, including the Russian Central Bank's Automated Workstation Client, ATMs, and card processing.(Citation: Cyber Forensicator Silence Jan 2019)(Citation: SecureList Silence Nov 2017)

## APT3 - G0022

[APT3](<https://attack.mitre.org/groups/G0022>) is a China-based threat group that researchers have attributed to China's Ministry of State Security.(Citation: FireEye Clandestine Wolf)(Citation: Recorded Future APT3 May 2017) This group is responsible for the campaigns known as Operation Clandestine Fox, Operation Clandestine Wolf, and Operation Double Tap.(Citation: FireEye Clandestine Wolf)(Citation: FireEye Operation Double Tap) As of June 2015, the group appears to have shifted from targeting primarily US victims to primarily political organizations in Hong Kong.(Citation: Symantec Buckeye)

In 2017, MITRE developed an APT3 Adversary Emulation Plan.(Citation: APT3 Adversary Emulation Plan)

## APT38 - G0082

[APT38](<https://attack.mitre.org/groups/G0082>) is a North Korean state-sponsored threat group that specializes in financial cyber operations; it has been attributed to the Reconnaissance General Bureau.(Citation: CISA AA20-239A BeagleBoyz August 2020) Active since at least 2014, [APT38](<https://attack.mitre.org/groups/G0082>) has targeted banks, financial institutions, casinos, cryptocurrency exchanges, SWIFT system endpoints, and ATMs in at least 38 countries worldwide. Significant operations include the 2016 Bank of Bangladesh heist, during which [APT38](<https://attack.mitre.org/groups/G0082>) stole \$81 million, as well as attacks against Bancomext (2018) and Banco de Chile (2018); some of their attacks have been destructive.(Citation: CISA AA20-239A BeagleBoyz August 2020)(Citation: FireEye APT38 Oct 2018)(Citation: DOJ North Korea Indictment Feb 2021)(Citation: Kaspersky Lazarus Under The Hood Blog 2017)

North Korean group definitions are known to have significant overlap, and some security

researchers report all North Korean state-sponsored cyber activity under the name [Lazarus Group](<https://attack.mitre.org/groups/G0032>) instead of tracking clusters or subgroups.

## APT34 - G0057

APT34 is an Iranian cyber espionage group that has been active since at least 2014. The group has targeted a variety of industries, including financial, government, energy, chemical, and telecommunications, and has largely focused its operations within the Middle East. FireEye assesses that the group works on behalf of the Iranian government based on infrastructure details that contain references to Iran, use of Iranian infrastructure, and targeting that aligns with nation-state interests. APT34 loosely aligns with public reporting related to OilRig, but may not wholly align due to companies tracking threat groups in different ways. (Citation: FireEye APT34 Dec 2017)

## Group5 - G0043

[Group5](<https://attack.mitre.org/groups/G0043>) is a threat group with a suspected Iranian nexus, though this attribution is not definite. The group has targeted individuals connected to the Syrian opposition via spearphishing and watering holes, normally using Syrian and Iranian themes. [Group5](<https://attack.mitre.org/groups/G0043>) has used two commonly available remote access tools (RATs), [njRAT](<https://attack.mitre.org/software/S0385>) and [NanoCore](<https://attack.mitre.org/software/S0336>), as well as an Android RAT, DroidJack. ## APT37 - G0067

[APT37](<https://attack.mitre.org/groups/G0067>) is a North Korean state-sponsored cyber espionage group that has been active since at least 2012. The group has targeted victims primarily in South Korea, but also in Japan, Vietnam, Russia, Nepal, China, India, Romania, Kuwait, and other parts of the Middle East. [APT37](<https://attack.mitre.org/groups/G0067>) has also been linked to the following campaigns between 2016-2018: Operation Daybreak, Operation Erebus, Golden Time, Evil New Year, Are you Happy?, FreeMilk, North Korean Human Rights, and Evil New Year 2018.(Citation: FireEye APT37 Feb 2018)(Citation: Securelist ScarCruft Jun 2016)(Citation: Talos Group123)

North Korean group definitions are known to have significant overlap, and some security researchers report all North Korean state-sponsored cyber activity under the name [Lazarus Group](<https://attack.mitre.org/groups/G0032>) instead of tracking clusters or subgroups.

## FIN6 - G0037

[FIN6](<https://attack.mitre.org/groups/G0037>) is a cyber crime group that has stolen payment card data and sold it for profit on underground marketplaces. This group has aggressively targeted and compromised point of sale (PoS) systems in the hospitality and retail sectors.(Citation: FireEye FIN6 April 2016)(Citation: FireEye FIN6 Apr 2019)

## BlackOasis - G0063

[BlackOasis](<https://attack.mitre.org/groups/G0063>) is a Middle Eastern threat group that is believed to be a customer of Gamma Group. The group has shown interest in prominent figures in the United Nations, as well as opposition bloggers, activists, regional news correspondents, and think tanks. (Citation: Securelist BlackOasis Oct 2017) (Citation: Securelist APT Trends Q2 2017) A group known by Microsoft as [NEODYMIUM](<https://attack.mitre.org/groups/G0055>) is reportedly associated closely with [BlackOasis](<https://attack.mitre.org/groups/G0063>) operations, but evidence that the group names are aliases has not been identified. # FIN7 - G0046

[FIN7](<https://attack.mitre.org/groups/G0046>) is a financially-motivated threat group that has been active since 2013 primarily targeting the U.S. retail, restaurant, and hospitality sectors, often using point-of-sale malware. A portion of [FIN7](<https://attack.mitre.org/groups/G0046>) was run out of a front company called Combi Security. Since 2020 [FIN7](<https://attack.mitre.org/groups/G0046>) shifted operations to a big game hunting (BGH) approach including use of [REvil](<https://attack.mitre.org/software/S0496>) ransomware and their own Ransomware as a Service (RaaS), Darkside. [FIN7](<https://attack.mitre.org/groups/G0046>) may be linked to the [Carbanak](<https://attack.mitre.org/groups/G0008>) Group, but there appears to be several groups using [Carbanak](<https://attack.mitre.org/software/S0030>) malware and are therefore tracked separately.(Citation: FireEye FIN7 March 2017)(Citation: FireEye FIN7 April 2017)(Citation: FireEye CARBANAK June 2017)(Citation: FireEye FIN7 Aug 2018)(Citation: CrowdStrike Carbon Spider August 2021)

## Kimsuky - G0094

[Kimsuky](<https://attack.mitre.org/groups/G0094>) is a North Korea-based cyber espionage group that has been active since at least 2012. The group initially focused on targeting South Korean government entities, think tanks, and individuals identified as experts in various fields, and expanded its operations to include the United States, Russia, Europe, and the UN. [Kimsuky](<https://attack.mitre.org/groups/G0094>) has focused its intelligence collection activities on foreign policy and national security issues related to the Korean peninsula, nuclear policy, and sanctions.(Citation: EST Kimsuky April 2019)(Citation: BRI Kimsuky April 2019)(Citation: Cybereason Kimsuky November 2020)(Citation: Malwarebytes Kimsuky June 2021)(Citation: CISA AA20-301A Kimsuky)

[Kimsuky](<https://attack.mitre.org/groups/G0094>) was assessed to be responsible for the 2014 Korea Hydro & Nuclear Power Co. compromise; other notable campaigns include Operation STOLEN PENCIL (2018), Operation Kabar Cobra (2019), and Operation Smoke Screen (2019).(Citation: Netscout Stolen Pencil Dec 2018)(Citation: EST Kimsuky SmokeScreen April 2019)(Citation: AhnLab Kimsuky Kabar Cobra Feb 2019)

North Korean group definitions are known to have significant overlap, and some security researchers report all North Korean state-sponsored cyber activity under the name [Lazarus Group](<https://attack.mitre.org/groups/G0032>) instead of tracking clusters or subgroups.

## OilRig - G0049

[OilRig](<https://attack.mitre.org/groups/G0049>) is a suspected Iranian threat group that has targeted Middle Eastern and international victims since at least 2014. The group has targeted a variety of sectors, including financial, government, energy, chemical, and telecommunications. It appears the group carries out supply chain attacks, leveraging the trust relationship between organizations to attack their primary targets. FireEye assesses that the group works on behalf of the Iranian government based on infrastructure details that contain references to Iran, use of Iranian infrastructure, and targeting that aligns with nation-state interests.(Citation: Palo Alto OilRig April 2017)(Citation: ClearSky OilRig Jan 2017)(Citation: Palo Alto OilRig May 2016)(Citation: Palo Alto OilRig Oct 2016)(Citation: Unit 42 Playbook Dec 2017)(Citation: FireEye APT34 Dec 2017)(Citation: Unit 42 QUADAGENT July 2018)

## NEODYMIUM - G0055

[NEODYMIUM](<https://attack.mitre.org/groups/G0055>) is an activity group that conducted a campaign in May 2016 and has heavily targeted Turkish victims. The group has demonstrated similarity to another activity group called [PROMETHIUM](<https://attack.mitre.org/groups/G0056>)

due to overlapping victim and campaign characteristics. (Citation: Microsoft NEODYMIUM Dec 2016) (Citation: Microsoft SIR Vol 21) [NEODYMIUM](<https://attack.mitre.org/groups/G0055>) is reportedly associated closely with [BlackOasis](<https://attack.mitre.org/groups/G0063>) operations, but evidence that the group names are aliases has not been identified. (Citation: CyberScoop BlackOasis Oct 2017)

## Machete - G0095

[Machete](<https://attack.mitre.org/groups/G0095>) is a suspected Spanish-speaking cyber espionage group that has been active since at least 2010. It has primarily focused its operations within Latin America, with a particular emphasis on Venezuela, but also in the US, Europe, Russia, and parts of Asia. [Machete](<https://attack.mitre.org/groups/G0095>) generally targets high-profile organizations such as government institutions, intelligence services, and military units, as well as telecommunications and power companies.(Citation: Cylance Machete Mar 2017)(Citation: Securelist Machete Aug 2014)(Citation: ESET Machete July 2019)(Citation: 360 Machete Sep 2020)

## CostaRicto - G0132

[CostaRicto](<https://attack.mitre.org/groups/G0132>) is a suspected hacker-for-hire cyber espionage campaign that has targeted multiple industries worldwide since at least 2019. [CostaRicto](<https://attack.mitre.org/groups/G0132>)'s targets, a large portion of which are financial institutions, are scattered across Europe, the Americas, Asia, Australia, and Africa, with a large concentration in South Asia.(Citation: BlackBerry CostaRicto November 2020)

## Confucius - G0142

[Confucius](<https://attack.mitre.org/groups/G0142>) is a cyber espionage group that has primarily targeted military personnel, high-profile personalities, business persons, and government organizations in South Asia since at least 2013. Security researchers have noted similarities between [Confucius](<https://attack.mitre.org/groups/G0142>) and [Patchwork](<https://attack.mitre.org/groups/G0040>), particularly in their respective custom malware code and targets.(Citation: TrendMicro Confucius APT Feb 2018)(Citation: TrendMicro Confucius APT Aug 2021)(Citation: Uptycs Confucius APT Jan 2021)

# Higaisa - G0126

[Higaisa](<https://attack.mitre.org/groups/G0126>) is a threat group suspected to have South Korean origins. [Higaisa](<https://attack.mitre.org/groups/G0126>) has targeted government, public, and trade organizations in North Korea; however, they have also carried out attacks in China, Japan, Russia, Poland, and other nations. [Higaisa](<https://attack.mitre.org/groups/G0126>) was first disclosed in early 2019 but is assessed to have operated as early as 2009.(Citation: Malwarebytes Higaisa 2020)(Citation: Zscaler Higaisa 2020)(Citation: PTSecurity Higaisa 2020)

## Andariel - G0138

[Andariel](<https://attack.mitre.org/groups/G0138>) is a North Korean state-sponsored threat group that has been active since at least 2009. [Andariel](<https://attack.mitre.org/groups/G0138>) has primarily focused its operations—which have included destructive attacks—against South Korean government agencies, military organizations, and a variety of domestic companies; they have also conducted cyber financial operations against ATMs, banks, and cryptocurrency exchanges. [Andariel](<https://attack.mitre.org/groups/G0138>)'s notable activity includes Operation Black Mine, Operation GoldenAxe, and Campaign Rifle.(Citation: FSI Andariel Campaign Rifle July 2017)(Citation: IssueMakersLab Andariel GoldenAxe May 2017)(Citation: AhnLab Andariel Subgroup of Lazarus June 2018)(Citation: TrendMicro New Andariel Tactics July 2018)(Citation: CrowdStrike Silent Chollima Adversary September 2021)

[Andariel](<https://attack.mitre.org/groups/G0138>) is considered a sub-set of [Lazarus Group](<https://attack.mitre.org/groups/G0032>), and has been attributed to North Korea's Reconnaissance General Bureau.(Citation: Treasury North Korean Cyber Groups September 2019)

North Korean group definitions are known to have significant overlap, and some security researchers report all North Korean state-sponsored cyber activity under the name [Lazarus Group](<https://attack.mitre.org/groups/G0032>) instead of tracking clusters or subgroups.

## X-Agent for Android - S0314

[X-Agent for Android](<https://attack.mitre.org/software/S0314>) is Android malware that was placed in a repackaged version of a Ukrainian artillery targeting application. The malware reportedly retrieved general location data on where the victim device was used, and therefore could likely indicate the potential location of Ukrainian artillery. (Citation: CrowdStrike-Android) Is it tracked separately from the [CHOPSTICK](<https://attack.mitre.org/software/S0023>).

## Winnti for Linux - S0430

[Winnti for Linux](<https://attack.mitre.org/software/S0430>) is a trojan, seen since at least 2015, designed specifically for targeting Linux systems. Reporting indicates the winnti malware family is shared across a number of actors including [Winnti Group](<https://attack.mitre.org/groups/G0044>). The Windows variant is tracked separately under [Winnti for Windows](<https://attack.mitre.org/software/S0141>). (Citation: Chronicle Winnti for Linux May 2019)

The tag is: `misp-galaxy:mitre-malware="Winnti for Linux - S0430"`

Winnti for Linux - S0430 is also known as:

## Desert Scorpion - S0505

[Desert Scorpion](<https://attack.mitre.org/software/S0505>) is surveillanceware that has targeted the Middle East, specifically individuals located in Palestine. [Desert Scorpion](<https://attack.mitre.org/software/S0505>) is suspected to have been operated by the threat actor APT-C-23.(Citation: Lookout Desert Scorpion)

## Green Lambert - S0690

[Green Lambert](<https://attack.mitre.org/software/S0690>) is a modular backdoor that security researchers assess has been used by an advanced threat group referred to as Longhorn and The

Lamberts. First reported in 2017, the Windows variant of [Green Lambert](<https://attack.mitre.org/software/S0690>) may have been used as early as 2008; a macOS version was uploaded to a multiscanner service in September 2014.(Citation: Kaspersky Lamberts Toolkit April 2017)(Citation: Objective See Green Lambert for OSX Oct 2021)

## AutoIt backdoor - S0129

[AutoIt backdoor](<https://attack.mitre.org/software/S0129>) is malware that has been used by the actors responsible for the MONSOON campaign. The actors frequently used it in weaponized .pps files exploiting CVE-2014-6352. (Citation: Forcepoint Monsoon) This malware makes use of the legitimate scripting language for Windows GUI automation with the same name.

## Cobalt Strike - S0154

[Cobalt Strike](<https://attack.mitre.org/software/S0154>) is a commercial, full-featured, remote access tool that bills itself as “adversary simulation software designed to execute targeted attacks and emulate the post-exploitation actions of advanced threat actors”. Cobalt Strike’s interactive post-exploit capabilities cover the full range of ATT&CK tactics, all executed within a single, integrated system.(Citation: cobaltstrike manual)

In addition to its own capabilities, [Cobalt Strike](<https://attack.mitre.org/software/S0154>) leverages the capabilities of other well-known tools such as Metasploit and [Mimikatz](<https://attack.mitre.org/software/S0002>). (Citation: cobaltstrike manual)

## Smoke Loader - S0226

[Smoke Loader](<https://attack.mitre.org/software/S0226>) is a malicious bot application that can be used to load other malware. [Smoke Loader](<https://attack.mitre.org/software/S0226>) has been seen in the wild since at least 2011 and has included a number of different payloads. It is notorious for its use of deception and self-protection. It also comes with several plug-ins. (Citation: Malwarebytes SmokeLoader 2016) (Citation: Microsoft Dofail 2018)

## Gold Dragon - S0249

[Gold Dragon](<https://attack.mitre.org/software/S0249>) is a Korean-language, data gathering implant that was first observed in the wild in South Korea in July 2017. [Gold Dragon](<https://attack.mitre.org/software/S0249>) was used along with [Brave Prince](<https://attack.mitre.org/software/S0252>) and [RunningRAT](<https://attack.mitre.org/software/S0253>) in operations targeting organizations associated with the 2018 Pyeongchang Winter Olympics. ## Olympic Destroyer - S0365

[Olympic Destroyer](<https://attack.mitre.org/software/S0365>) is malware that was used by [Sandworm Team](<https://attack.mitre.org/groups/G0034>) against the 2018 Winter Olympics, held in Pyeongchang, South Korea. The main purpose of the malware was to render infected computer systems inoperable. The malware leverages various native Windows utilities and API calls to carry out its destructive tasks. [Olympic Destroyer](<https://attack.mitre.org/software/S0365>) has worm-like features to spread itself across a computer network in order to maximize its destructive impact.(Citation: Talos Olympic Destroyer 2018)(Citation: US District Court Indictment GRU Unit 74455 October 2020)

## T9000 - S0098

[T9000](<https://attack.mitre.org/software/S0098>) is a backdoor that is a newer variant of the T5000 malware family, also known as Plat1. Its primary function is to gather information about the victim. It has been used in multiple targeted attacks against U.S.-based organizations. (Citation: FireEye admin@338 March 2014) (Citation: Palo Alto T9000 Feb 2016)

## JPIN - S0201

[JPIN](<https://attack.mitre.org/software/S0201>) is a custom-built backdoor family used by [PLATINUM](<https://attack.mitre.org/groups/G0068>). Evidence suggests developers of [JPIN](<https://attack.mitre.org/software/S0201>) and [Dipsind](<https://attack.mitre.org/software/S0200>) code bases were related in some way. (Citation: Microsoft PLATINUM April 2016)

## Shamoon - S0140

[Shamoon](<https://attack.mitre.org/software/S0140>) is wiper malware that was first used by an Iranian group known as the "Cutting Sword of Justice" in 2012. Other versions known as Shamoon 2 and Shamoon 3 were observed in 2016 and 2018. [Shamoon](<https://attack.mitre.org/software/S0140>) has also been seen leveraging [RawDisk](<https://attack.mitre.org/software/S0364>) and Filerase to carry out data wiping tasks. The term Shamoon is sometimes used to refer to the group using the malware as well as the malware itself.(Citation: Palo Alto Shamoon Nov 2016)(Citation: Unit 42 Shamoon3 2018)(Citation: Symantec Shamoon 2012)(Citation: FireEye Shamoon Nov 2016)

## Sykipot - S0018

[Sykipot](<https://attack.mitre.org/software/S0018>) is malware that has been used in spearphishing campaigns since approximately 2007 against victims primarily in the US. One variant of [Sykipot](<https://attack.mitre.org/software/S0018>) hijacks smart cards on victims. (Citation: Alienvault Sykipot DOD Smart Cards) The group using this malware has also been referred to as Sykipot. (Citation: Blasco 2013)

## CHOPSTICK - S0023

[CHOPSTICK](<https://attack.mitre.org/software/S0023>) is a malware family of modular backdoors used by [APT28](<https://attack.mitre.org/groups/G0007>). It has been used since at least 2012 and is usually dropped on victims as second-stage malware, though it has been used as first-stage malware in several cases. It has both Windows and Linux variants. (Citation: FireEye APT28) (Citation: ESET Sednit Part 2) (Citation: FireEye APT28 January 2017) (Citation: DOJ GRU Indictment Jul 2018) It is tracked separately from the [X-Agent for Android](<https://attack.mitre.org/software/S0314>).

## Circles - S0602

[Circles](<https://attack.mitre.org/software/S0602>) reportedly takes advantage of Signaling System 7 (SS7) weaknesses, the protocol suite used to route phone calls, to both track the location of mobile devices and intercept voice calls and SMS messages. It can be connected to a telecommunications company's infrastructure or purchased as a cloud service. Circles has reportedly been linked to the NSO Group.(Citation: CitizenLab Circles)

## InvisiMole - S0260

[InvisiMole](<https://attack.mitre.org/software/S0260>) is a modular spyware program that has been

used by the InvisiMole Group since at least 2013. [InvisiMole](<https://attack.mitre.org/software/S0260>) has two backdoor modules called RC2FM and RC2CL that are used to perform post-exploitation activities. It has been discovered on compromised victims in the Ukraine and Russia. [Gamaredon Group](<https://attack.mitre.org/groups/G0047>) infrastructure has been used to download and execute [InvisiMole](<https://attack.mitre.org/software/S0260>) against a small number of victims.(Citation: ESET InvisiMole June 2018)(Citation: ESET InvisiMole June 2020)

## Stuxnet - S0603

[Stuxnet](<https://attack.mitre.org/software/S0603>) was the first publicly reported piece of malware to specifically target industrial control systems devices. [Stuxnet](<https://attack.mitre.org/software/S0603>) is a large and complex piece of malware that utilized multiple different behaviors including multiple zero-day vulnerabilities, a sophisticated Windows rootkit, and network infection routines.(Citation: Symantec W.32 Stuxnet Dossier)(Citation: CISA ICS Advisory ICSA-10-272-01)(Citation: ESET Stuxnet Under the Microscope)(Citation: Langer Stuxnet) [Stuxnet](<https://attack.mitre.org/software/S0603>) was discovered in 2010, with some components being used as early as November 2008.(Citation: Symantec W.32 Stuxnet Dossier)

## Adups - S0309

[Adups](<https://attack.mitre.org/software/S0309>) is software that was pre-installed onto Android devices, including those made by BLU Products. The software was reportedly designed to help a Chinese phone manufacturer monitor user behavior, transferring sensitive data to a Chinese server. (Citation: NYTimes-BackDoor) (Citation: BankInfoSecurity-BackDoor)

## EKANS - S0605

[EKANS](<https://attack.mitre.org/software/S0605>) is ransomware variant written in Golang that first appeared in mid-December 2019 and has been used against multiple sectors, including energy, healthcare, and automotive manufacturing, which in some cases resulted in significant operational disruptions. [EKANS](<https://attack.mitre.org/software/S0605>) has used a hard-coded kill-list of

processes, including some associated with common ICS software platforms (e.g., GE Proficiency, Honeywell HMIWeb, etc), similar to those defined in [MegaCortex](<https://attack.mitre.org/software/S0576>). (Citation: Dragos EKANS)(Citation: Palo Alto Unit 42 EKANS)

## QakBot - S0650

[QakBot](<https://attack.mitre.org/software/S0650>) is a modular banking trojan that has been used primarily by financially-motivated actors since at least 2007. [QakBot](<https://attack.mitre.org/software/S0650>) is continuously maintained and developed and has evolved from an information stealer into a delivery agent for ransomware, most notably [ProLock](<https://attack.mitre.org/software/S0654>) and [Egregor](<https://attack.mitre.org/software/S0554>). # BitPaymer - S0570

[BitPaymer](<https://attack.mitre.org/software/S0570>) is a ransomware variant first observed in August 2017 targeting hospitals in the U.K. [BitPaymer](<https://attack.mitre.org/software/S0570>) uses a unique encryption key, ransom note, and contact information for each operation. [BitPaymer](<https://attack.mitre.org/software/S0570>) has several indicators suggesting overlap with the [Dridex](<https://attack.mitre.org/software/S0384>) malware and is often delivered via [Dridex](<https://attack.mitre.org/software/S0384>). ## KillDisk - S0607

[KillDisk](<https://attack.mitre.org/software/S0607>) is a disk-wiping tool designed to overwrite files with random data to render the OS unbootable. It was first observed as a component of [BlackEnergy](<https://attack.mitre.org/software/S0089>) malware during cyber attacks against Ukraine in 2015. [KillDisk](<https://attack.mitre.org/software/S0607>) has since evolved into stand-alone malware used by a variety of threat actors against additional targets in Europe and Latin America; in 2016 a ransomware component was also incorporated into some [KillDisk](<https://attack.mitre.org/software/S0607>) variants.(Citation: KillDisk Ransomware)(Citation: ESEST Black Energy Jan 2016)(Citation: Trend Micro KillDisk 1)(Citation: Trend Micro KillDisk 2)

## BlackEnergy - S0089

[BlackEnergy](<https://attack.mitre.org/software/S0089>) is a malware toolkit that has been used by both criminal and APT actors. It dates back to at least 2007 and was originally designed to create botnets for use in conducting Distributed Denial of Service (DDoS) attacks, but its use has evolved to support various plug-ins. It is well known for being used during the confrontation between Georgia and Russia in 2008, as well as in targeting Ukrainian institutions. Variants include BlackEnergy 2 and BlackEnergy 3. ## RATANKBA - S0241

[RATANKBA](<https://attack.mitre.org/software/S0241>) is a remote controller tool used by [Lazarus Group](<https://attack.mitre.org/groups/G0032>). [RATANKBA](<https://attack.mitre.org/software/S0241>) has been used in attacks targeting financial institutions in Poland, Mexico, Uruguay, the United Kingdom, and Chile. It was also seen used against organizations related to telecommunications, management consulting, information technology, insurance, aviation, and education. [RATANKBA](<https://attack.mitre.org/software/S0241>) has a graphical user interface to allow the attacker to issue jobs to perform on the infected machines. ## Reaver - S0172

[Reaver](<https://attack.mitre.org/software/S0172>) is a malware family that has been in the wild since at least late 2016. Reporting indicates victims have primarily been associated with the "Five Poisons," which are movements the Chinese government considers dangerous. The type of malware is rare due to its final payload being in the form of [Control Panel](<https://attack.mitre.org/techniques/T1218/002>) items.(Citation: Palo Alto Reaver Nov 2017)

## LiteDuke - S0513

[LiteDuke](<https://attack.mitre.org/software/S0513>) is a third stage backdoor that was used by [APT29](<https://attack.mitre.org/groups/G0016>), primarily in 2014-2015. [LiteDuke](<https://attack.mitre.org/software/S0513>) used the same dropper as [PolyglotDuke](<https://attack.mitre.org/software/S0518>), and was found on machines also compromised by [MiniDuke](<https://attack.mitre.org/software/S0051>). ## POWERSOURCE - S0145

[POWERSOURCE](<https://attack.mitre.org/software/S0145>) is a PowerShell backdoor that is a heavily obfuscated and modified version of the publicly available tool DNS\_TXT\_Pwnage. It was observed in February 2017 in spearphishing campaigns against personnel involved with United States Securities and Exchange Commission (SEC) filings at various organizations. The malware was delivered when macros were enabled by the victim and a VBS script was dropped. (Citation: FireEye FIN7 March 2017) (Citation: Cisco DNSMessenger March 2017)

## SimBad - S0419

[SimBad](<https://attack.mitre.org/software/S0419>) was a strain of adware on the Google Play Store, distributed through the RXDroider Software Development Kit. The name "SimBad" was derived from the fact that most of the infected applications were simulator games. The adware was controlled using an instance of the open source framework Parse Server.(Citation: CheckPoint SimBad 2019)

## Matryoshka - S0167

[Matryoshka](<https://attack.mitre.org/software/S0167>) is a malware framework used by [CopyKittens](<https://attack.mitre.org/groups/G0052>) that consists of a dropper, loader, and RAT. It has multiple versions; v1 was seen in the wild from July 2016 until January 2017. v2 has fewer commands and other minor differences. (Citation: ClearSky Wilted Tulip July 2017) (Citation: CopyKittens Nov 2015)

## Tomiris - S0671

[Tomiris](<https://attack.mitre.org/software/S0671>) is a backdoor written in Go that continuously queries its C2 server for executables to download and execute on a victim system. It was first reported in September 2021 during an investigation of a successful DNS hijacking campaign against a Commonwealth of Independent States (CIS) member. Security researchers assess there are similarities between [Tomiris](<https://attack.mitre.org/software/S0671>) and [GoldMax](<https://attack.mitre.org/software/S0588>). ## GreyEnergy - S0342

[GreyEnergy](<https://attack.mitre.org/software/S0342>) is a backdoor written in C and compiled in Visual Studio. [GreyEnergy](<https://attack.mitre.org/software/S0342>) shares similarities with the [BlackEnergy](<https://attack.mitre.org/software/S0089>) malware and is thought to be the successor of it.(Citation: ESET GreyEnergy Oct 2018)

## GravityRAT - S0237

[GravityRAT](<https://attack.mitre.org/software/S0237>) is a remote access tool (RAT) and has been in ongoing development since 2016. The actor behind the tool remains unknown, but two usernames have been recovered that link to the author, which are "TheMartian" and "The Invincible." According to the National Computer Emergency Response Team (CERT) of India, the malware has been identified in attacks against organization and entities in India. (Citation: Talos GravityRAT)

## Proxysvc - S0238

[Proxysvc](<https://attack.mitre.org/software/S0238>) is a malicious DLL used by [Lazarus Group](<https://attack.mitre.org/groups/G0032>) in a campaign known as Operation GhostSecret. It has appeared to be operating undetected since 2017 and was mostly observed in higher education organizations. The goal of [Proxysvc](<https://attack.mitre.org/software/S0238>) is to deliver additional payloads to the target and to maintain control for the attacker. It is in the form of a DLL that can also be executed as a standalone process. (Citation: McAfee GhostSecret)

## PoetRAT - S0428

[PoetRAT](<https://attack.mitre.org/software/S0428>) is a remote access trojan (RAT) that was first identified in April 2020. [PoetRAT](<https://attack.mitre.org/software/S0428>) has been used in multiple campaigns against the private and public sectors in Azerbaijan, including ICS and SCADA systems in the energy sector. The STIBNITE activity group has been observed using the malware. [PoetRAT](<https://attack.mitre.org/software/S0428>) derived its name from references in the code to poet William Shakespeare. (Citation: Talos PoetRAT April 2020)(Citation: Talos PoetRAT October 2020)(Citation: Dragos Threat Report 2020)

## Mosquito - S0256

[Mosquito](<https://attack.mitre.org/software/S0256>) is a Win32 backdoor that has been used by [Turla](<https://attack.mitre.org/groups/G0010>). [Mosquito](<https://attack.mitre.org/software/S0256>) is made up of three parts: the installer, the launcher, and the backdoor. The main backdoor is called CommanderDLL and is launched by the loader program. (Citation: ESET Turla Mosquito Jan 2018)

## TrickBot - S0266

[TrickBot](<https://attack.mitre.org/software/S0266>) is a Trojan spyware program written in C++ that first emerged in September 2016 as a possible successor to [Dyre](<https://attack.mitre.org/software/S0024>). [TrickBot](<https://attack.mitre.org/software/S0266>) was developed and initially used by [Wizard Spider](<https://attack.mitre.org/groups/G0102>) for targeting banking sites in North America, Australia, and throughout Europe; it has since been used against all sectors worldwide as part of "big game hunting" ransomware campaigns.(Citation: S2 Grupo TrickBot June 2017)(Citation: Fidelis TrickBot Oct 2016)(Citation: IBM TrickBot Nov 2016)(Citation: CrowdStrike Wizard Spider October 2020)

## SLOTHFULMEDIA - S0533

[SLOTHFULMEDIA](<https://attack.mitre.org/software/S0533>) is a remote access Trojan written in

C++ that has been used by an unidentified "sophisticated cyber actor" since at least January 2017.(Citation: CISA MAR SLOTHFULMEDIA October 2020)(Citation: Costin Raiu IAmTheKing October 2020) It has been used to target government organizations, defense contractors, universities, and energy companies in Russia, India, Kazakhstan, Kyrgyzstan, Malaysia, Ukraine, and Eastern Europe.(Citation: USCYBERCOM SLOTHFULMEDIA October 2020)(Citation: Kaspersky IAmTheKing October 2020)

In October 2020, Kaspersky Labs assessed [SLOTHFULMEDIA](<https://attack.mitre.org/software/S0533>) is part of an activity cluster it refers to as "IAmTheKing".(Citation: Kaspersky IAmTheKing October 2020) ESET also noted code similarity between [SLOTHFULMEDIA](<https://attack.mitre.org/software/S0533>) and droppers used by a group it refers to as "PowerPool".(Citation: ESET PowerPool Code October 2020)

## NOKKI - S0353

[NOKKI](<https://attack.mitre.org/software/S0353>) is a modular remote access tool. The earliest observed attack using [NOKKI](<https://attack.mitre.org/software/S0353>) was in January 2018. [NOKKI](<https://attack.mitre.org/software/S0353>) has significant code overlap with the [KONNI](<https://attack.mitre.org/software/S0356>) malware family. There is some evidence potentially linking [NOKKI](<https://attack.mitre.org/software/S0353>) to [APT37](<https://attack.mitre.org/groups/G0067>). ## Bazar - S0534

[Bazar](<https://attack.mitre.org/software/S0534>) is a downloader and backdoor that has been used since at least April 2020, with infections primarily against professional services, healthcare, manufacturing, IT, logistics and travel companies across the US and Europe. [Bazar](<https://attack.mitre.org/software/S0534>) reportedly has ties to [TrickBot](<https://attack.mitre.org/software/S0266>) campaigns and can be used to deploy additional malware, including ransomware, and to steal sensitive data.(Citation: Cybereason Bazar July 2020)

## Dridex - S0384

[Dridex](<https://attack.mitre.org/software/S0384>) is a prolific banking Trojan that first appeared in 2014. By December 2019, the US Treasury estimated [Dridex](<https://attack.mitre.org/software/S0384>) had infected computers in hundreds of banks and financial institutions in over 40 countries, leading to more than \$100 million in theft. [Dridex](<https://attack.mitre.org/software/S0384>) was created from the source code of the Bugat banking Trojan (also known as Cridex).(Citation: Dell Dridex Oct 2015)(Citation: Kaspersky Dridex May 2017)(Citation: Treasury EvilCorp Dec 2019)

## GoldenSpy - S0493

[GoldenSpy](<https://attack.mitre.org/software/S0493>) is a backdoor malware which has been packaged with legitimate tax preparation software. [GoldenSpy](<https://attack.mitre.org/software/S0493>) was discovered targeting organizations in China, being delivered with the "Intelligent Tax" software suite which is produced by the Golden Tax Department of Aisino Credit Information Co. and required to pay local taxes.(Citation: Trustwave GoldenSpy June 2020)

## WannaCry - S0366

[WannaCry](<https://attack.mitre.org/software/S0366>) is ransomware that was first seen in a global attack during May 2017, which affected more than 150 countries. It contains worm-like features to spread itself across a computer network using the SMBv1 exploit EternalBlue.(Citation: LogRhythm WannaCry)(Citation: US-CERT WannaCry 2017)(Citation: Washington Post WannaCry 2017)(Citation: FireEye WannaCry 2017)
