Higaisa - G0126

[Higaisa](https://attack.mitre.org/groups/G0126) is a threat group suspected to have South Korean origins. [Higaisa](https://attack.mitre.org/groups/G0126) has targeted government, public, and trade organizations in North Korea; however, they have also carried out attacks in China, Japan, Russia, Poland, and other nations. [Higaisa](https://attack.mitre.org/groups/G0126) was first disclosed in early 2019 but is assessed to have operated as early as 2009.(Citation: Malwarebytes Higaisa 2020)(Citation: Zscaler Higaisa 2020)(Citation: PTSecurity Higaisa 2020)

Andariel - G0138

[Andariel](https://attack.mitre.org/groups/G0138) is a North Korean state-sponsored threat group that has been active since at least 2009. [Andariel](https://attack.mitre.org/groups/G0138) has primarily focused its operations—which have included destructive attacks—against South Korean government agencies, military organizations, and a variety of domestic companies; they have also conducted cyber financial operations against ATMs, banks, and cryptocurrency exchanges. [Andariel](https://attack.mitre.org/groups/G0138)'s notable activity includes Operation Black Mine, Operation GoldenAxe, and Campaign Rifle.(Citation: FSI Andariel Campaign Rifle July 2017)(Citation: IssueMakersLab Andariel GoldenAxe May 2017)(Citation: AhnLab Andariel Subgroup of Lazarus June 2018)(Citation: TrendMicro New Andariel Tactics July 2018)(Citation: CrowdStrike Silent Chollima Adversary September 2021)

[Andariel](https://attack.mitre.org/groups/G0138) is considered a sub-set of [Lazarus Group](https://attack.mitre.org/groups/G0032), and has been attributed to North Korea's Reconnaissance General Bureau.(Citation: Treasury North Korean Cyber Groups September 2019)

North Korean group definitions are known to have significant overlap, and some security researchers report all North Korean state-sponsored cyber activity under the name [Lazarus Group](https://attack.mitre.org/groups/G0032) instead of tracking clusters or subgroups.

X-Agent for Android - S0314

[X-Agent for Android](https://attack.mitre.org/software/S0314) is Android malware that was placed in a repackaged version of a Ukrainian artillery targeting application. The malware reportedly retrieved general location data on where the victim device was used, and therefore could likely indicate the potential location of Ukrainian artillery. (Citation: CrowdStrike-Android) Is it tracked separately from the [CHOPSTICK](https://attack.mitre.org/software/S0023).

Black Basta - S1070

[Black Basta](https://attack.mitre.org/software/S1070) is ransomware written in C++ that has been offered within the ransomware-as-a-service (RaaS) model since at least April 2022; there are variants that target Windows and VMWare ESXi servers. [Black Basta](https://attack.mitre.org/software/S1070) operations have included the double extortion technique where in addition to demanding ransom for decrypting the files of targeted organizations the cyber actors also threaten to post sensitive information to a leak site if the ransom is not paid. [Black Basta](https://attack.mitre.org/software/S1070) affiliates have targeted multiple high-value organizations, with the largest number of victims based in the U.S. Based on similarities in TTPs, leak sites, payment sites, and negotiation tactics, security researchers assess the [Black Basta](https://attack.mitre.org/software/S1070) RaaS operators could include current or former members of the [Conti](https://attack.mitre.org/software/S0575) group.(Citation: Palo Alto Networks Black Basta August 2022)(Citation: Deep Instinct Black Basta August 2022)(Citation: Minerva Labs Black Basta May 2022)(Citation: Avertium Black Basta June 2022)(Citation: NCC Group Black Basta June 2022)(Citation: Cyble Black Basta May 2022)

Zeus Panda - S0330

[Zeus Panda](https://attack.mitre.org/software/S0330) is a Trojan designed to steal banking information and other sensitive credentials for exfiltration. [Zeus Panda](https://attack.mitre.org/software/S0330)'s original source code was leaked in 2011, allowing threat actors to use its source code as a basis for new malware variants. It is mainly used to target Windows operating systems ranging from Windows XP through Windows 10.(Citation: Talos Zeus Panda Nov 2017)(Citation: GDATA Zeus Panda June 2017)

AutoIt backdoor - S0129

[AutoIt backdoor](https://attack.mitre.org/software/S0129) is malware that has been used by the actors responsible for the MONSOON campaign. The actors frequently used it in weaponized .pps files exploiting CVE-2014-6352. (Citation: Forcepoint Monsoon) This malware makes use of the legitimate scripting language for Windows GUI automation with the same name.

Cobalt Strike - S0154

[Cobalt Strike](https://attack.mitre.org/software/S0154) is a commercial, full-featured, remote access tool that bills itself as “adversary simulation software designed to execute targeted attacks and emulate the post-exploitation actions of advanced threat actors”. Cobalt Strike’s interactive post-

exploit capabilities cover the full range of ATT&CK tactics, all executed within a single, integrated system.(Citation: cobaltstrike manual)

In addition to its own capabilities, [Cobalt Strike](https://attack.mitre.org/software/S0154) leverages the capabilities of other well-known tools such as Metasploit and [Mimikatz](https://attack.mitre.org/software/S0002).(Citation: cobaltstrike manual)

Gold Dragon - S0249

[Gold Dragon](https://attack.mitre.org/software/S0249) is a Korean-language, data gathering implant that was first observed in the wild in South Korea in July 2017. [Gold Dragon](https://attack.mitre.org/software/S0249) was used along with [Brave Prince](https://attack.mitre.org/software/S0252) and [RunningRAT](https://attack.mitre.org/software/S0253) in operations targeting organizations associated with the 2018 Pyeongchang Winter Olympics. Olympic Destroyer - S0365

[Olympic Destroyer](https://attack.mitre.org/software/S0365) is malware that was used by [Sandworm Team](https://attack.mitre.org/groups/G0034) against the 2018 Winter Olympics, held in Pyeongchang, South Korea. The main purpose of the malware was to render infected computer systems inoperable. The malware leverages various native Windows utilities and API calls to carry out its destructive tasks. [Olympic Destroyer](https://attack.mitre.org/software/S0365) has worm-like features to spread itself across a computer network in order to maximize its destructive impact.(Citation: Talos Olympic Destroyer 2018)(Citation: US District Court Indictment GRU Unit 74455 October 2020)

S.O.V.A. - S1062

[S.O.V.A.](https://attack.mitre.org/software/S1062) is an Android banking trojan that was first identified in August 2021 and has subsequently been found in a variety of applications, including banking, cryptocurrency wallet/exchange, and shopping apps. [S.O.V.A.](https://attack.mitre.org/software/S1062), which is Russian for "owl", contains features not commonly found in Android malware, such as session cookie theft.(Citation: threatfabric_sova_0921)(Citation: cleafy_sova_1122)

macOS.OSAMiner - S1048

[macOS.OSAMiner](https://attack.mitre.org/software/S1048) is a Monero mining trojan that was first observed in 2018; security researchers assessed [macOS.OSAMiner](https://attack.mitre.org/software/S1048) may have been circulating since at least 2015. [macOS.OSAMiner](https://attack.mitre.org/software/S1048) is known for embedding one run-only AppleScript into another, which helped the malware evade full analysis for five years due to a lack of Apple event (AEVT) analysis tools.(Citation: SentinelLabs reversing run-only applescripts 2021)(Citation: VMRay OSAMiner dynamic analysis 2021)

T9000 - S0098

[T9000](https://attack.mitre.org/software/S0098) is a backdoor that is a newer variant of the T5000 malware family, also known as Plat1. Its primary function is to gather information about the victim. It has been used in multiple targeted attacks against U.S.-based organizations. (Citation: FireEye admin@338 March 2014) (Citation: Palo Alto T9000 Feb 2016)

Shamoon - S0140

[Shamoon](https://attack.mitre.org/software/S0140) is wiper malware that was first used by an Iranian group known as the "Cutting Sword of Justice" in 2012. Other versions known as Shamoon 2 and Shamoon 3 were observed in 2016 and 2018. [Shamoon](https://attack.mitre.org/software/S0140) has also been seen leveraging [RawDisk](https://attack.mitre.org/software/S0364) and Filerase to carry out data wiping tasks. The term Shamoon is sometimes used to refer to the group using the malware as well as the malware itself.(Citation: Palo Alto Shamoon Nov 2016)(Citation: Unit 42 Shamoon3 2018)(Citation: Symantec Shamoon 2012)(Citation: FireEye Shamoon Nov 2016)

Sykipot - S0018

[Sykipot](https://attack.mitre.org/software/S0018) is malware that has been used in spearphishing campaigns since approximately 2007 against victims primarily in the US. One variant of [Sykipot](https://attack.mitre.org/software/S0018) hijacks smart cards on victims. (Citation: Alienvault Sykipot DOD Smart Cards) The group using this malware has also been referred to as Sykipot. (Citation: Blasco 2013)

CHOPSTICK - S0023

[CHOPSTICK](https://attack.mitre.org/software/S0023) is a malware family of modular backdoors used by [APT28](https://attack.mitre.org/groups/G0007). It has been used since at least 2012 and is usually dropped on victims as second-stage malware, though it has been used as first-stage malware in several cases. It has both Windows and Linux variants. (Citation: FireEye APT28) (Citation: ESET Sednit Part 2) (Citation: FireEye APT28 January 2017) (Citation: DOJ GRU Indictment Jul 2018) It is tracked separately from the [X-Agent for Android](https://attack.mitre.org/software/S0314).

Gooligan - S0290

[Gooligan](https://attack.mitre.org/software/S0290) is a malware family that runs privilege escalation exploits on Android devices and then uses its escalated privileges to steal authentication tokens that can be used to access data from many Google applications. [Gooligan](https://attack.mitre.org/software/S0290) has been described as part of the Ghost Push Android malware family. (Citation: Gooligan Citation) (Citation: Ludwig-GhostPush) (Citation: Lookout-Gooligan)

Stuxnet - S0603

[Stuxnet](https://attack.mitre.org/software/S0603) was the first publicly reported piece of malware to specifically target industrial control systems devices. [Stuxnet](https://attack.mitre.org/software/S0603) is a large and complex piece of malware that utilized multiple different behaviors including multiple zero-day vulnerabilities, a sophisticated Windows rootkit, and network infection routines.(Citation: Nicolas Falliere, Liam O Murchu, Eric Chien February 2011)(Citation: CISA ICS Advisory ICSA-10-272-01)(Citation: ESET Stuxnet Under the Microscope)(Citation: Langer Stuxnet) [Stuxnet](https://attack.mitre.org/software/S0603) was discovered in 2010, with some components being used as early as November 2008.(Citation: Nicolas Falliere, Liam O Murchu, Eric Chien February 2011)

Adups - S0309

[Adups](https://attack.mitre.org/software/S0309) is software that was pre-installed onto Android devices, including those made by BLU Products. The software was reportedly designed to help a Chinese phone manufacturer monitor user behavior, transferring sensitive data to a Chinese server. (Citation: NYTimes-BackDoor) (Citation: BankInfoSecurity-BackDoor)

BitPaymer - S0570

[BitPaymer](https://attack.mitre.org/software/S0570) is a ransomware variant first observed in August 2017 targeting hospitals in the U.K. [BitPaymer](https://attack.mitre.org/software/S0570) uses a unique encryption key, ransom note, and contact information for each operation. [BitPaymer](https://attack.mitre.org/software/S0570) has several indicators suggesting overlap with the [Dridex](https://attack.mitre.org/software/S0384) malware and is often delivered via [Dridex](https://attack.mitre.org/software/S0384).(Citation: Crowdstrike Indrik November 2018)

KillDisk - S0607

[KillDisk](https://attack.mitre.org/software/S0607) is a disk-wiping tool designed to overwrite files with random data to render the OS unbootable. It was first observed as a component of [BlackEnergy](https://attack.mitre.org/software/S0089) malware during cyber attacks against Ukraine in 2015. [KillDisk](https://attack.mitre.org/software/S0607) has since evolved into stand-alone malware used by a variety of threat actors against additional targets in Europe and Latin America; in 2016 a ransomware component was also incorporated into some [KillDisk](https://attack.mitre.org/software/S0607) variants.(Citation: KillDisk Ransomware)(Citation: ESEST Black Energy Jan 2016)(Citation: Trend Micro KillDisk 1)(Citation: Trend Micro KillDisk 2)

BlackEnergy - S0089

[BlackEnergy](https://attack.mitre.org/software/S0089) is a malware toolkit that has been used by both criminal and APT actors. It dates back to at least 2007 and was originally designed to create botnets for use in conducting Distributed Denial of Service (DDoS) attacks, but its use has evolved to support various plug-ins. It is well known for being used during the confrontation between Georgia and Russia in 2008, as well as in targeting Ukrainian institutions. Variants include BlackEnergy 2 and BlackEnergy 3. (Citation: F-Secure BlackEnergy 2014)

YiSpecter - S0311

[YiSpecter](https://attack.mitre.org/software/S0311) is a family of iOS and Android malware, first detected in November 2014, targeting users in mainland China and Taiwan. [YiSpecter](https://attack.mitre.org/software/S0311) abuses private APIs in iOS to infect both jailbroken and non-jailbroken devices.(Citation: paloalto_yispecter_1015)

AbstractEmu - S1061

[AbstractEmu](https://attack.mitre.org/software/S1061) is mobile malware that was first seen in Google Play and other third-party stores in October 2021. It was discovered in 19 Android applications, of which at least 7 abused known Android exploits for obtaining root permissions. [AbstractEmu](https://attack.mitre.org/software/S1061) was observed primarily impacting users in the United States, however victims are believed to be across a total of 17 countries.(Citation: lookout_abstractemu_1021)

Reaver - S0172

[Reaver](https://attack.mitre.org/software/S0172) is a malware family that has been in the wild since at least late 2016. Reporting indicates victims have primarily been associated with the "Five Poisons," which are movements the Chinese government considers dangerous. The type of malware is rare due to its final payload being in the form of [Control Panel](https://attack.mitre.org/techniques/T1218/002) items.(Citation: Palo Alto Reaver Nov 2017)

AvosLocker - S1053

[AvosLocker](https://attack.mitre.org/software/S1053) is ransomware written in C++ that has been offered via the Ransomware-as-a-Service (RaaS) model. It was first observed in June 2021 and has been used against financial services, critical manufacturing, government facilities, and other critical infrastructure sectors in the United States. As of March 2022, [AvosLocker](https://attack.mitre.org/software/S1053) had also been used against organizations in Belgium, Canada, China, Germany, Saudi Arabia, Spain, Syria, Taiwan, Turkey, the United Arab Emirates, and the United Kingdom.(Citation: Malwarebytes AvosLocker Jul 2021)(Citation: Trend Micro AvosLocker Apr 2022)(Citation: Joint CSA AvosLocker Mar 2022)

Royal - S1073

[Royal](https://attack.mitre.org/software/S1073) is ransomware that first appeared in early 2022; a version that also targets ESXi servers was later observed in February 2023. [Royal](https://attack.mitre.org/software/S1073) employs partial encryption and multiple threads to evade detection and speed encryption. [Royal](https://attack.mitre.org/software/S1073) has been used in attacks against multiple industries worldwide—including critical infrastructure. Security

researchers have identified similarities in the encryption routines and TTPs used in [Royal](https://attack.mitre.org/software/S1073) and [Conti](https://attack.mitre.org/software/S0575) attacks and noted a possible connection between their operators.(Citation: Microsoft Royal ransomware November 2022)(Citation: Cybereason Royal December 2022)(Citation: Kroll Royal Deep Dive February 2023)(Citation: Trend Micro Royal Linux ESXi February 2023)(Citation: CISA Royal AA23-061A March 2023)

Bumblebee - S1039

[Bumblebee](https://attack.mitre.org/software/S1039) is a custom loader written in C++ that has been used by multiple threat actors, including possible initial access brokers, to download and execute additional payloads since at least March 2022. [Bumblebee](https://attack.mitre.org/software/S1039) has been linked to ransomware operations including [Conti](https://attack.mitre.org/software/S0575), Quantum, and Mountlocker and derived its name from the appearance of "bumblebee" in the user-agent.(Citation: Google EXOTIC LILY March 2022)(Citation: Proofpoint Bumblebee April 2022)(Citation: Symantec Bumblebee June 2022)

POWERSOURCE - S0145

[POWERSOURCE](https://attack.mitre.org/software/S0145) is a PowerShell backdoor that is a heavily obfuscated and modified version of the publicly available tool DNS_TXT_Pwnage. It was observed in February 2017 in spearphishing campaigns against personnel involved with United States Securities and Exchange Commission (SEC) filings at various organizations. The malware was delivered when macros were enabled by the victim and a VBS script was dropped. (Citation: FireEye FIN7 March 2017) (Citation: Cisco DNSMessenger March 2017)

Drinik - S1054

[Drinik](https://attack.mitre.org/software/S1054) is an evolving Android banking trojan that was observed targeting customers of around 27 banks in India in August 2021. Initially seen as an SMS stealer in 2016, [Drinik](https://attack.mitre.org/software/S1054) resurfaced as a banking trojan with more advanced capabilities included in subsequent versions between September 2021 and August 2022.(Citation: cyble_drinik_1022)

Kobalos - S0641

[Kobalos](https://attack.mitre.org/software/S0641) is a multi-platform backdoor that can be used against Linux, FreeBSD, and Solaris. [Kobalos](https://attack.mitre.org/software/S0641) has been deployed against high profile targets, including high-performance computers, academic servers, an endpoint security vendor, and a large internet service provider; it has been found in Europe, North America, and Asia. [Kobalos](https://attack.mitre.org/software/S0641) was first identified in late 2019.(Citation: ESET Kobalos Feb 2021)(Citation: ESET Kobalos Jan 2021)

SUGARUSH - S1049

[SUGARUSH](https://attack.mitre.org/software/S1049) is a small custom backdoor that can establish a reverse shell over TCP to a hard coded C2 address. [SUGARUSH](https://attack.mitre.org/software/S1049) was first identified during analysis of UNC3890's [C0010](https://attack.mitre.org/campaigns/C0010) campaign targeting Israeli companies, which began in late 2020.(Citation: Mandiant UNC3890 Aug 2022)

SimBad - S0419

[SimBad](https://attack.mitre.org/software/S0419) was a strain of adware on the Google Play Store, distributed through the RXDroider Software Development Kit. The name "SimBad" was derived from the fact that most of the infected applications were simulator games. The adware was controlled using an instance of the open source framework Parse Server.(Citation: CheckPoint SimBad 2019)

Tomiris - S0671

[Tomiris](https://attack.mitre.org/software/S0671) is a backdoor written in Go that continuously queries its C2 server for executables to download and execute on a victim system. It was first reported in September 2021 during an investigation of a successful DNS hijacking campaign against a Commonwealth of Independent States (CIS) member. Security researchers assess there are similarities between [Tomiris](https://attack.mitre.org/software/S0671) and [GoldMax](https://attack.mitre.org/software/S0588).(Citation: Kaspersky Tomiris Sep 2021)

Daserf - S0187

[Daserf](https://attack.mitre.org/software/S0187) is a backdoor that has been used to spy on and steal from Japanese, South Korean, Russian, Singaporean, and Chinese victims. Researchers have identified versions written in both Visual C and Delphi. (Citation: Trend Micro Daserf Nov 2017) (Citation: Secureworks BRONZE BUTLER Oct 2017)

Bread - S0432

[Bread](https://attack.mitre.org/software/S0432) was a large-scale billing fraud malware family known for employing many different cloaking and obfuscation techniques in an attempt to continuously evade Google Play Store's malware detection. 1,700 unique Bread apps were detected and removed from the Google Play Store before being downloaded by users.(Citation: Google Bread)

GravityRAT - S0237

[GravityRAT](https://attack.mitre.org/software/S0237) is a remote access tool (RAT) and has been in ongoing development since 2016. The actor behind the tool remains unknown, but two usernames have been recovered that link to the author, which are "TheMartian" and "The Invincible." According to the National Computer Emergency Response Team (CERT) of India, the malware has been identified in attacks against organization and entities in India. (Citation: Talos GravityRAT)

Proxysvc - S0238

[Proxysvc](https://attack.mitre.org/software/S0238) is a malicious DLL used by [Lazarus Group](https://attack.mitre.org/groups/G0032) in a campaign known as Operation GhostSecret. It has appeared to be operating undetected since 2017 and was mostly observed in higher education organizations. The goal of [Proxysvc](https://attack.mitre.org/software/S0238) is to deliver additional payloads to the target and to maintain control for the attacker. It is in the form of a DLL that can also be executed as a standalone process. (Citation: McAfee GhostSecret)

PoetRAT - S0428

[PoetRAT](https://attack.mitre.org/software/S0428) is a remote access trojan (RAT) that was first identified in April 2020. [PoetRAT](https://attack.mitre.org/software/S0428) has been used in multiple campaigns against the private and public sectors in Azerbaijan, including ICS and SCADA systems in the energy sector. The STIBNITE activity group has been observed using the malware. [PoetRAT](https://attack.mitre.org/software/S0428) derived its name from references in the code to poet William Shakespeare. (Citation: Talos PoetRAT April 2020)(Citation: Talos PoetRAT October 2020)(Citation: Dragos Threat Report 2020)

Bundlore - S0482

[Bundlore](https://attack.mitre.org/software/S0482) is adware written for macOS that has been in use since at least 2015. Though categorized as adware, [Bundlore](https://attack.mitre.org/software/S0482) has many features associated with more traditional backdoors.(Citation: MacKeeper Bundlore Apr 2019)

KGH_SPY - S0526

[KGH_SPY](https://attack.mitre.org/software/S0526) is a modular suite of tools used by [Kimsuky](https://attack.mitre.org/groups/G0094) for reconnaissance, information stealing, and backdoor capabilities. [KGH_SPY](https://attack.mitre.org/software/S0526) derived its name from PDB paths and internal names found in samples containing "KGH".(Citation: Cybereason Kimsuky November 2020)

Mosquito - S0256

[Mosquito](https://attack.mitre.org/software/S0256) is a Win32 backdoor that has been used by [Turla](https://attack.mitre.org/groups/G0010). [Mosquito](https://attack.mitre.org/software/S0256) is made up of three parts: the installer, the launcher, and the backdoor. The main backdoor is called CommanderDLL and is launched by the loader program. (Citation: ESET Turla Mosquito Jan 2018)

TrickBot - S0266

[TrickBot](https://attack.mitre.org/software/S0266) is a Trojan spyware program written in C++ that first emerged in September 2016 as a possible successor to [Dyre](https://attack.mitre.org/software/S0024). [TrickBot](https://attack.mitre.org/software/S0266) was developed and initially used by [Wizard Spider](https://attack.mitre.org/groups/G0102) for targeting banking sites in North America, Australia, and throughout Europe; it has since been used against all sectors worldwide as part of "big game hunting" ransomware campaigns.(Citation: S2 Grupo TrickBot June 2017)(Citation: Fidelis TrickBot Oct 2016)(Citation: IBM TrickBot Nov 2016)(Citation: CrowdStrike Wizard Spider October 2020)

NOKKI - S0353

[NOKKI](https://attack.mitre.org/software/S0353) is a modular remote access tool. The earliest observed attack using [NOKKI](https://attack.mitre.org/software/S0353) was in January 2018. [NOKKI](https://attack.mitre.org/software/S0353) has significant code overlap with the [KONNI](https://attack.mitre.org/software/S0356) malware family. There is some evidence potentially linking [NOKKI](https://attack.mitre.org/software/S0353) to [APT37](https://attack.mitre.org/groups/G0067).(Citation: Unit 42 NOKKI Sept 2018)(Citation: Unit 42 Nokki Oct 2018)

Bazar - S0534

[Bazar](https://attack.mitre.org/software/S0534) is a downloader and backdoor that has been used since at least April 2020, with infections primarily against professional services, healthcare, manufacturing, IT, logistics and travel companies across the US and Europe. [Bazar](https://attack.mitre.org/software/S0534) reportedly has ties to [TrickBot](https://attack.mitre.org/software/S0266) campaigns and can be used to deploy additional malware, including ransomware, and to steal sensitive data.(Citation: Cybereason Bazar July 2020)

Dridex - S0384

[Dridex](https://attack.mitre.org/software/S0384) is a prolific banking Trojan that first appeared in 2014. By December 2019, the US Treasury estimated [Dridex](https://attack.mitre.org/software/S0384) had infected computers in hundreds of banks and financial institutions in over 40 countries, leading to more than $100 million in theft. [Dridex](https://attack.mitre.org/software/S0384) was created from the source code of the Bugat banking Trojan (also known as Cridex).(Citation: Dell Dridex Oct 2015)(Citation: Kaspersky Dridex May 2017)(Citation: Treasury EvilCorp Dec 2019)

GoldenSpy - S0493

[GoldenSpy](https://attack.mitre.org/software/S0493) is a backdoor malware which has been packaged with legitimate tax preparation software. [GoldenSpy](https://attack.mitre.org/software/S0493) was discovered targeting organizations in China, being delivered with the "Intelligent Tax" software suite which is produced by the Golden Tax Department of Aisino Credit Information Co. and required to pay local taxes.(Citation: Trustwave GoldenSpy June 2020)

Emotet - S0367

[Emotet](https://attack.mitre.org/software/S0367) is a modular malware variant which is primarily used as a downloader for other malware variants such as [TrickBot](https://attack.mitre.org/software/S0266) and [IcedID](https://attack.mitre.org/software/S0483). Emotet first emerged in June 2014 and has been primarily used to target the banking sector. (Citation: Trend Micro Banking Malware Jan 2019)

NotPetya - S0368

[NotPetya](https://attack.mitre.org/software/S0368) is malware that was used by [Sandworm Team](https://attack.mitre.org/groups/G0034) in a worldwide attack starting on June 27, 2017. While [NotPetya](https://attack.mitre.org/software/S0368) appears as a form of ransomware, its main purpose was to destroy data and disk structures on compromised systems; the attackers never intended to make the encrypted data recoverable. As such, [NotPetya](https://attack.mitre.org/software/S0368) may be more appropriately thought of as a form of wiper malware. [NotPetya](https://attack.mitre.org/software/S0368) contains worm-like features to spread itself across a computer network using the SMBv1 exploits EternalBlue and EternalRomance.(Citation: Talos Nyetya June 2017)(Citation: US-CERT NotPetya 2017)(Citation: ESET Telebots June 2017)(Citation: US District Court Indictment GRU Unit 74455 October 2020)

ShimRat - S0444

[ShimRat](https://attack.mitre.org/software/S0444) has been used by the suspected China-based adversary [Mofang](https://attack.mitre.org/groups/G0103) in campaigns targeting multiple countries and sectors including government, military, critical infrastructure, automobile, and weapons development. The name "[ShimRat](https://attack.mitre.org/software/S0444)" comes from the malware’s extensive use of Windows Application Shimming to maintain persistence. (Citation: FOX-IT May 2016 Mofang)

Lokibot - S0447

[Lokibot](https://attack.mitre.org/software/S0447) is a widely distributed information stealer that was first reported in 2015. It is designed to steal sensitive information such as usernames, passwords, cryptocurrency wallets, and other credentials. [Lokibot](https://attack.mitre.org/software/S0447) can also create a backdoor into infected systems to allow an attacker to install additional payloads.(Citation: Infoblox Lokibot January 2019)(Citation: Morphisec Lokibot April 2020)(Citation: CISA Lokibot September 2020)

Maze - S0449

[Maze](https://attack.mitre.org/software/S0449) ransomware, previously known as "ChaCha", was discovered in May 2019. In addition to encrypting files on victim machines for impact, [Maze](https://attack.mitre.org/software/S0449) operators conduct information stealing campaigns prior to encryption and post the information online to extort affected companies.(Citation: FireEye Maze May 2020)(Citation: McAfee Maze March 2020)(Citation: Sophos Maze VM September 2020)

ProLock - S0654

[ProLock](https://attack.mitre.org/software/S0654) is a ransomware strain that has been used in Big

Game Hunting (BGH) operations since at least 2020, often obtaining initial access with [QakBot](https://attack.mitre.org/software/S0650). [ProLock](https://attack.mitre.org/software/S0654) is the successor to PwndLocker ransomware which was found to contain a bug allowing decryption without ransom payment in 2019.(Citation: Group IB Ransomware September 2020)

AppleJeus - S0584

[AppleJeus](https://attack.mitre.org/software/S0584) is a family of downloaders initially discovered in 2018 embedded within trojanized cryptocurrency applications. [AppleJeus](https://attack.mitre.org/software/S0584) has been used by [Lazarus Group](https://attack.mitre.org/groups/G0032), targeting companies in the energy, finance, government, industry, technology, and telecommunications sectors, and several countries including the United States, United Kingdom, South Korea, Australia, Brazil, New Zealand, and Russia. [AppleJeus](https://attack.mitre.org/software/S0584) has been used to distribute the [FALLCHILL](https://attack.mitre.org/software/S0181) RAT.(Citation: CISA AppleJeus Feb 2021)

Mandrake - S0485

[Mandrake](https://attack.mitre.org/software/S0485) is a sophisticated Android espionage platform that has been active in the wild since at least 2016. [Mandrake](https://attack.mitre.org/software/S0485) is very actively maintained, with sophisticated features and attacks that are executed with surgical precision.

[Mandrake](https://attack.mitre.org/software/S0485) has gone undetected for several years by providing legitimate, ad-free applications with social media and real reviews to back the apps. The malware is only activated when the operators issue a specific command.(Citation: Bitdefender Mandrake)

DRATzarus - S0694

[DRATzarus](https://attack.mitre.org/software/S0694) is a remote access tool (RAT) that has been used by [Lazarus Group](https://attack.mitre.org/groups/G0032) to target the defense and aerospace organizations globally since at least summer 2020. [DRATzarus](https://attack.mitre.org/software/S0694) shares similarities with [Bankshot](https://attack.mitre.org/software/S0239), which was used by [Lazarus Group](https://attack.mitre.org/groups/G0032) in 2017 to target the Turkish financial sector.(Citation: ClearSky Lazarus Aug 2020)

Conti - S0575

[Conti](https://attack.mitre.org/software/S0575) is a Ransomware-as-a-Service (RaaS) that was first observed in December 2019. [Conti](https://attack.mitre.org/software/S0575) has been deployed via [TrickBot](https://attack.mitre.org/software/S0266) and used against major corporations and government agencies, particularly those in North America. As with other ransomware families, actors using [Conti](https://attack.mitre.org/software/S0575) steal sensitive files and information from compromised networks, and threaten to publish this data unless the ransom is paid.(Citation: Cybereason Conti Jan 2021)(Citation: CarbonBlack Conti July 2020)(Citation: Cybleinc Conti January

ThiefQuest - S0595

[ThiefQuest](https://attack.mitre.org/software/S0595) is a virus, data stealer, and wiper that presents itself as ransomware targeting macOS systems. [ThiefQuest](https://attack.mitre.org/software/S0595) was first seen in 2020 distributed via trojanized pirated versions of popular macOS software on Russian forums sharing torrent links.(Citation: Reed thiefquest fake ransom) Even though [ThiefQuest](https://attack.mitre.org/software/S0595) presents itself as ransomware, since the dynamically generated encryption key is never sent to the attacker it may be more appropriately thought of as a form of wiper malware.(Citation: wardle evilquest partii)(Citation: reed thiefquest ransomware analysis)

ThreatNeedle - S0665

[ThreatNeedle](https://attack.mitre.org/software/S0665) is a backdoor that has been used by [Lazarus Group](https://attack.mitre.org/groups/G0032) since at least 2019 to target cryptocurrency, defense, and mobile gaming organizations. It is considered to be an advanced cluster of [Lazarus Group](https://attack.mitre.org/groups/G0032)'s Manuscrypt (a.k.a. NukeSped) malware family.(Citation: Kaspersky ThreatNeedle Feb 2021)

Sibot - S0589

[Sibot](https://attack.mitre.org/software/S0589) is dual-purpose malware written in VBScript designed to achieve persistence on a compromised system as well as download and execute additional payloads. Microsoft discovered three [Sibot](https://attack.mitre.org/software/S0589) variants in early 2021 during its investigation of [APT29](https://attack.mitre.org/groups/G0016) and the [SolarWinds Compromise](https://attack.mitre.org/campaigns/C0024).(Citation: MSTIC NOBELIUM Mar 2021)

Brute Ratel C4 - S1063

[Brute Ratel C4](https://attack.mitre.org/software/S1063) is a commercial red-teaming and adversarial attack simulation tool that first appeared in December 2020. [Brute Ratel C4](https://attack.mitre.org/software/S1063) was specifically designed to avoid detection by endpoint detection and response (EDR) and antivirus (AV) capabilities, and deploys agents called badgers to enable arbitrary command execution for lateral movement, privilege escalation, and persistence. In September 2022, a cracked version of [Brute Ratel C4](https://attack.mitre.org/software/S1063) was leaked in the cybercriminal underground, leading to its use by threat actors.(Citation: Dark Vortex Brute Ratel C4)(Citation: Palo Alto Brute Ratel July 2022)(Citation: MDSec Brute Ratel August 2022)(Citation: SANS Brute Ratel October 2022)(Citation: Trend Micro Black Basta October 2022)

Invoke-PSImage - S0231

[Invoke-PSImage](https://attack.mitre.org/software/S0231) takes a PowerShell script and embeds the bytes of the script into the pixels of a PNG image. It generates a one liner for executing either from a file of from the web. Example of usage is embedding the PowerShell code from the Invoke-Mimikatz module and embed it into an image file. By calling the image file from a macro for example, the macro will download the picture and execute the PowerShell code, which in this case will dump the passwords. (Citation: GitHub Invoke-PSImage)

Tor - S0183

[Tor](https://attack.mitre.org/software/S0183) is a software suite and network that provides increased anonymity on the Internet. It creates a multi-hop proxy network and utilizes multilayer encryption to protect both the message and routing information. [Tor](https://attack.mitre.org/software/S0183) utilizes "Onion Routing," in which messages are encrypted with multiple layers of encryption; at each step in the proxy network, the topmost layer is decrypted and the contents forwarded on to the next node until it reaches its destination. (Citation: Dingledine Tor The Second-Generation Onion Router)

PoshC2 - S0378

[PoshC2](https://attack.mitre.org/software/S0378) is an open source remote administration and post-exploitation framework that is publicly available on GitHub. The server-side components of the tool are primarily written in Python, while the implants are written in [PowerShell](https://attack.mitre.org/techniques/T1059/001). Although [PoshC2](https://attack.mitre.org/software/S0378) is primarily focused on Windows implantation, it does contain a basic Python dropper for Linux/macOS.(Citation: GitHub PoshC2)

RawDisk - S0364

[RawDisk](https://attack.mitre.org/software/S0364) is a legitimate commercial driver from the EldoS Corporation that is used for interacting with files, disks, and partitions. The driver allows for direct modification of data on a local computer's hard drive. In some cases, the tool can enact these raw

disk modifications from user-mode processes, circumventing Windows operating system security features.(Citation: EldoS RawDisk ITpro)(Citation: Novetta Blockbuster Destructive Malware)
